New Orleans: Jambalaya on the Levee 143

Flowing Oil and Booming Trade Give New Orleans Prosperity;
Creoles Add the Spice, the Sparkle—and the Mardi Gras

BY HARNETT T. KANE*

With Illustrations by National Geographic Photographer Justin Locke

THE man from Iowa took a breath of New Orleans's balmy night air, let his eye travel from the iron-laced gallery to the small cup of ink-black coffee in his hand, and gave a slow sigh: "This town—why, it makes living a pleasure!"

To other visitors, more rock-ribbed in their respectability, such an observation may sound, of course, slightly suspect. Life is real, they will point out; life is earnest. To this the true Orleanian, of the French Quarter downtown or the Garden District uptown, the Mississippi River front, or crowded "backatown," will politely agree. But he will add: it can also be a lot of fun.

While the Orleanian may, and probably does, work as hard as the merchant in Philadelphia or the laborer in Chicago, he will not make quite so much a thing of it. "You know what counts most?" a Frenchman once asked me. "Just being able to enjoy yourself when you're doing nothing at all."

A good time here may mean an evening on a balcony in the Vieux Carré, watching the shadows against a blue-stuccoed wall, sipping from a cool glass, and letting the rest of America stroll by. Or an afternoon before a fireplace, talking good talk with friends in a converted plantation house. Or a quiet meal in one of several superlative restaurants, or in a private home whose cook treasures "receipts" inherited from *grand'mère*, which she will not divulge to her mistress.

Unlike the so-called typical Texan, the Orleanian seldom boasts. If a stranger fails to appreciate the delights of this city—*eh*, let him fume; he himself is the loser. The

Orleanian admits at once that his cuisine à la *créole* is inimitable. Why shouldn't it be? Through the generations his ancestors experimented to make it precisely so.

Like its food, New Orleans is a gumbo—a composition of many peoples, many viewpoints, many riches. It is a great port, child of the tawny Mississippi River and the green Gulf of Mexico to the south; a descendant province of Mediterranean peoples, tenacious of their cultures; a green-bung semitropical town retaining something of the air of a West Indian settlement under a white-hot sun. Above all, New Orleans may be considered an attitude. "There are few things on earth," one man said, "worth a fit of indigestion."

Where France and Spain Meet Brooklyn

The place is, also, a sum of assorted contradictions. Its storied French Quarter turns out to be as much Spanish as French. Its leisurely manners fail to obscure a solid commercial prosperity beyond anything the city has known in the past. On its streets one can hear the soft ripple of Latin tongues or, even more frequently, the pungent notes of Brooklynese.

One can glimpse reasons for its reputation for gaiety; yet New Orleans has long been one of the most devout cities on the continent, with a myriad of churches of all faiths, and All Saints' Day as one of its two great fêtes.

I know of no other American city, in fact,

* Mr. Kane, a native New Orleanian, is the author of many books about the South, including *The Bayous of Louisiana*, *Deep Delta Country*, and *Sketches on the Mississippi*.

Acorns and Oak Leaves Wreath Labranche House in Iron

From their balconies in the French Quarter Orleanians watch sights such as this horse-and-carriage for hire. The century-old building stands at 700 Royal Street. Apartments occupy upper floors; shops use the lower.

where men and women advertise so often in the newspapers to seek favors of a saint, to announce that they will honor another saint after the granting of a request for a physical cure, and to thank a third for helping them get a husband for a difficult daughter.

A friend who lives on old Esplanade Avenue told me of a case in point: "The other day two bums were punching it out over there. Well, a nun walks by, and she kind of slips in the street. Both the bums jump up, help her, and ask Sister is she all right. That's New Orleans."

The fact that the bums returned to their thumping a moment later may be taken as another illustration of the city's essential spirit.

The past comes close in New Orleans, and it is a past as tangible as the water-front wharves or the sheathlike leaves of its banana plants.

One section after another has links with a long and variegated history: a tile-roofed landmark; the dusty shop of a beloved antique dealer who served successive eras; a canal left over from the day when commerce floated into the center of the city; the remnant of a crumbled fort; a slightly accented way of speech; a shrug that replaces a question mark.

"Daddy, What's a Hill?"

Newcomers may notice first the flatness of the terrain. In all this deep delta of the Mississippi, for mile after mile of bayou-bordered land, there are no hills—save one, a pleasant little man-made mound put up in Audubon Park in order to help show the children what a hill is. Most of

the city stands barely at or below sea level or river level, in a saucer protected by levees.

A native sums it up with a grin: "The only direction this ground can go is down." A single heavy rain could drown much of New Orleans in a matter of hours; the fact that it doesn't is a tribute to one of the world's great drainage systems, fantastic coils and monsters of pumps that suck out the water in a marvel of engineering.

This feat was not always so easily managed, of course. An older Orleanian with a sense of humor lifts his eyebrow as he denies the charge made by a northern friend that he has webbed feet. "But," he concedes, "I'd never swear that Grandma didn't!"

Floods, Fevers, and Imported China

At various points occurs the phenomenon that may astonish and alarm the uninitiated. Along the levees ships float high above the streets, especially in the Mississippi's spring rise. Riding the water, the vessels lie in reality at a higher level than the people's heads. As long as they do, the people will not forget their master, the Mississippi. Restrained by the mounds of earth, the river through the centuries has brought the city its share of the world's wealth and accepted from it the products it sends to the nations.

New Orleans was making history when most of the rest of the continent had only four-legged life. Spain first made vague claim to all the lower Mississippi, but it was France which began settlement on the Gulf in 1699. About two decades later a French party picked the city's

A Sidewalk Artist Offers Water Colors While You Wait

William Collins makes the gate to Jackson Square his outdoor studio. "New Orleans," he says, "is the American Paris and the French Quarter is its Montmartre." Background shows St. Louis Cathedral (page 151).

Mississippi's Serpentine Twists Tell Why New Orleans Is Called the Crescent City

Levees and upriver cutoffs divert floods; pumping stations exhaust rain water. Huey P. Long Bridge (center) carries U. S. Highway 90 across the river. Towers of the business district appear in lower right.

40 Miles of River Front Welcome Shipping from the Globe's Far Corners

This year New Orleans celebrates the 150th anniversary of the Louisiana Purchase, of which it was a part (page 148). Recreating the past, flatboats will drift down the Mississippi with northern cargoes.

actual site. It lay in a quaky terrain—fairly high as the region went, yet, it turned out, often flooded from two directions. In the words of an ancient from the last century: "If the river didn't get you from the front, Lake Pontchartrain watered you from the rear."

Flood, fever, pestilence, neglect from Europe . . . *La Nouvelle Orleans* fought them all and managed to survive, a Gallic outpost some 110 winding miles from the Gulf.

At an early date luxury appeared. Old records support accounts of imported china, carved furniture, silks and damasks, and spices.

Kings granted estates on the Mississippi, and whispers told of court favorites dispatched regretfully to Louisiana, with small fortunes as consolation. Younger sons of high family arrived to make their way beside peasants and earnest bourgeois householders anxious to establish a name for themselves.

Accent on Amour

Always, however, the gaudy, the raffish note. The Scotsman financier-gambler John Law flouted his Mississippi Bubble, and his agents scoured French jails and the streets for unwilling settlers. Thousands died on the Gulf sands, cursing Louisiana; other thousands, hardier or merely luckier, survived. Smugglers, pirates, traders, swindlers, remittance men—New Orleans swallowed them all in its highly flavored jambalaya.

The first New Orleanians had a certain Latin attitude—frankness, or simple awareness between man and woman; an unpuritanical liking for things of the senses; a fondness (some thought it a mania) for games of chance.

Of Bernard de Marigny, golden boy of his generation, people said his philosophy was *l'argesse*, *finesse*, and *amour*, especially *amour*. Putting up a subdivision, he named streets for girls whose qualities he appreciated; one he frankly called *Rue d'Amour*, and the next *Rue des Bons Enfants*, for the good children who logically follow love.

Treaties of 1762 and 1763 saw Louisiana tossed from France to His Hispanic Majesty. The Spaniards clanked in, took over management, married the French girls, and were absorbed in a mixture of the two nations. Thus arose the Creoles. In New Orleans parlance, the term denotes simply a white descendant of the original settlers, French, Spanish, or both. The Creole, let it be well noted, is the Knickerbocker of Louisiana.

Another 40 years, and the Latin flavor intensified. Up the Mississippi, the bayous and tributaries, advanced a civilization sharply different from that of the earnest New Englander

or the Virginia cavalier, the buckskinned western or farmer of the plains. The Franco-Spanish settler had a gift of laughter, a liking for relaxation in the shade, but also a will to set up the good life for himself. He built châteaux on his plantation acres, raised sugar cane, and kept the homeland green in memory.

Yet, however the Louisianian felt about it, change broke upon him. World politics shifted. In 1801 Spain returned Louisiana to Napoleon, who sold it to the United States in 1803. For \$15,000,000 (plus interest) the upstart democracy acquired a vast territory, the heartland of America, a great part of which it hardly wanted. Not did many of the Anglo-Saxons approve of this peculiar New Orleans, with its equally peculiar people.

Thus started a division, both geographical and spiritual, which continues in a limited way even a century and a half after the Louisiana Purchase. The sophisticated Creole sniffed at the American *arriviste* and called him a pig; the American thought the Creole a peacock. Some Americans announced grandly that they did New Orleans a favor by coming here. But, among the natives, to say that a certain fellow was American . . . *Monsieur*, that was an insult, clear, unmistakable, premeditated.

There followed years of clash, competition—and growth. For generations the grassy expanse of Canal Street provided a line of separation. Below it remained the earlier section, the "Old Square," with narrow Creole houses; above appeared the new Anglo-Saxon area, wider-spaced, less "European" in look.

Creole jostled American in sugar growing and sugar handling, law, politics. They traded insults, and many died in tragic duels whose byword was "pistols for two, breakfast for one." A strange experiment found the city split for a time into three separate "municipalities." The Americans put up their flamboyantly columned St. Charles, one of the great hotels of the hemisphere. The Creoles answered the challenge with the lustrous St. Louis Hotel, a Continental-style caravansary.

How to Creolize a Conqueror

The energetic Americans won the race; yet gradually, in many important respects, the conquered ones seemed to be conquering their conquerors. A Creole friend puts it this way: "We're like the Chinese—a pervasive race, and an enveloping one." As with the earlier Spanish arrivals, the newcomers took as brides the daughters of the natives. Scotsman, Irishman, Englishman, Yankee from Salem, Kentuckian, New Yorker, Carolinian—each merged with the Creole, and the original New Orleans strain maintained itself.

These new Orleanians practiced the quaffing of the strong Louisiana coffee, managed to en-

Rex's Floats Barely Squeeze Through Mardi Gras Merrymakers Cramming Broad Canal Street

New Orleans again, for carnival organizations present new themes every year.

joy an afternoon in the courtyard, and savor, without too stringent an attack of conscience, the delights of the city's many attractions. Some even found that it could be good business to interrupt a heavy morning at the office with a cup of *café*, over a commercial deal. They became, according to a favorite New Orleans word, "Creolized." In time their children's names might be Brown or Brandon, but the air and inflection were Llvandais or Boisblanc.

At the same time the new American influence made the city bloom as it had never done. Up the river edge of New Orleans and down it, to the back and across the Mississippi as well, sprang suburbs, or *fachourgs*, villages, outlying settlements that vied with and in time supplanted the strung-out plantations. Through the 1830's and '40's and '50's the goose hung quite high.

Down the Mississippi floated the teeming wealth of America: hides and grain, timber, articles raw and articles manufactured, and, not least, cotton bales, often piled so high on steamboats that the vessels appeared about to capsize. These were the glory days of the river packets, the *J. M. White*, the *Duke of New Orleans*, the *Sultana*; days of smiling gamblers, of whole families moving down to the sugar country, of excited men on the way west to Texas and also to Latin America.

New Orleans had become, among other things, the country's port of expansion to new frontiers; it spawned a hundred revolutions, a thousand whispered projects for invasions to the south or west.

In a single decade—1830 to 1840—its population jumped from 46,082 to 102,193, making New Orleans the third largest city in the country. Only New York and Baltimore were larger. In exports of domestic products its port competed with New York's as the Nation's biggest. Boastfully, New Orleans claimed to own or control half of U. S. capital. Chicago, St. Louis, and the others—New Orleans looked on them as frontier outposts.

Flavor from a Dozen Nations

To the Americans, New Orleans had a redolence, a flavor of the exotic. The locale had long had strong German influence, a "*Côte des Allemands*" along the river and German colonies below the original French Quarter, with their own churches, *volkfest*s, and, ultimately, French relatives and a French accent.

There were Chinese, and Greeks, and also Acadians, or Cajuns, descendants of doughty Nova Scotia French exiled to Louisiana. These last were zesty, black-eyed people possessed of enormous vitality. Many migrated from Bayou Lafourche to New Orleans.

Then, too, not least, the Irish. They gave their name to the roughly defined "Irish Channel" near the American water front. In the 1830's the Americans financed a New Basin Canal, requiring the work of thousands. Irishmen were imported, and epidemics of yellow fever and cholera cut them down, so that their bones lined the edges of the waterway.

Still, many survived; and, in a flush slave economy, an Irishman was far cheaper than a dark bondsman. If a slave died, his owner lost dollars; when an Irishman sank to the ground, God's kingdom had a recruit.

Later, Filipinos arrived to take places in the shrimp-drying industry of the bayous, setting up Oriental settlements of platforms like palmetto-thatched matchboxes on stilts over the water.* Italians emigrated to settle near the water front or on the plantations. Yugoslavs, clannish, untalkative, rode to points nearer the river mouth to make the planting and digging of oysters their own.

The Paris of America

Before the Civil War it seemed that all the world rode to New Orleans, to grin and tell about it afterward. The Creole town had captured the mind of the Nation as a place with a flavor and a color all its own. Paris of America, good-time capital of the U. S., cried some; hell on wheels, Sodom and Gomorrah on the steaming mud flats, sniffed others.

Mrs. Andrew Jackson expressed the latter view when she wrote home: "Great Babylon is come up before me. Oh, the wickedness, the idolatry of this place! . . . Oh, farewell. Pray for your sister in a heathen land." She saw, to be sure, only the surface, and part of that.

As the years passed, New Orleans could claim rank as the first American municipality in which opera was established on a permanent basis with a resident company. While such enterprises struggled feebly in New York, New Orleans supported two French companies, and, eventually, uptown American houses presented a variety of visiting troupes.

A Golden Age of the theater had also dawned here. Authorities described New Orleans's St. Charles as the country's grandest playhouse. Stars yearned to act here. Salaries went high, and prestige rose, for New Orleans was an actors' paradise, a volatile town that loved the mummers and did not mind letting them know it. Women tossed handkerchiefs, corsages, jewels at favorite players. One ecstatic Frenchman leaped to his feet and almost threw himself out of his box. (Friends caught his coat-tails.)

Charleston Street Takes Its Tally From Gridlock From a Store Established in Colonial Days

The picture on the left shows a street scene in Charleston, South Carolina, where a store established in colonial days has become a landmark. The store, which was founded in 1733, is one of the oldest in the city. It is a two-story building with a green-painted balcony. The street is busy with people walking and shopping. The scene is set in a historic, colonial-style environment.

Dinner at Antoine's: a New Orleans Rite

[illegible]

For the first time, the American Academy of Pediatrics has issued a policy statement on the use of the Internet. The statement, "The Internet: A Guide for Pediatricians," was published in the November 1997 issue of the *Pediatrics* journal. The statement was developed by the American Academy of Pediatrics' Committee on the Internet, which was formed in 1995. The committee's goal was to provide pediatricians with information about the Internet and to develop guidelines for its use in the pediatric setting. The statement discusses the benefits of the Internet, such as access to information and communication, and the risks, such as exposure to inappropriate content and privacy concerns. It also provides recommendations for pediatricians, parents, and children on how to use the Internet safely and effectively.

A Week of Privilege Ends: Masks and Costumes Will Be Laid Aside on the Morrow

Now, at the close of the week, the masks and costumes will be laid aside on the morrow. The audience will be dressed in their own clothes, and the performers in their own costumes. The week of privilege is over.

Hostesses in Ante Belant Gownns Greer Visitors to Baldwin Lodge During Spring Fiesta

Working in the house by the front of the house and the back of the house with the most southern most in
 Long and the southern most in the house the New Orleans and the group of women towards the new

But sooner or later natives and visitors alike headed for the water front. "The master street of the world," as an enthusiast termed it. For four or five miles the levee bustled with ships and men and goods. The line of craft, curving with the river, lay two and three deep. For most of the distance a man could step from vessel to vessel without once touching shore.

Here were arrogant white steam packets, ocean-going ships of black and gray, flatboats, western river boats. A caller confessed: "I shall want a microscope when I return to England, so miserably small and petty will seem all its features." After New Orleans, many places looked small, and also drab.

War Ends an Era

Yet cautiously he edged steadily nearer. By the 1850's railroads and canals were cutting into the river trade; it continued to grow, but not so rapidly enough. In 1861 the city linked itself with the Confederacy, though many influential elements thought its destiny lay more logically with the Union.

War brought blockade, early occupation, and destruction of established routes of trade. Slowly at first, but inexorably, the acid of poverty ate into the big houses. The pillared doorways went neglected. On waterfront streets grass sprang up between the cobblestones.

Born in 1910, I remember the sight of vast empty warehouses, a few scattered bananas rotting in the summer afternoon. As a boy I shivered in passing the abandoned St. Louis Hotel, a forgotten ruin of a place; children of the day told stories of ghosts that groined inside the boarded-up wreck.

Men who had been lawyers took jobs as day laborers. Families had to leave 20-room houses on which they could no longer pay even the interest charges. Much of the once-elite French Quarter became a kind of slum, with impoverished families crowded into former drawing rooms, oil stoves smoking beneath ceiling rosettes from which chandeliers had hung.

Then New Orleans, which had never stopped struggling, drew itself up again, almost by its bootstraps. Its superb location, its position at the end of the tunnel into the Nation's heart, its place in relation to Latin America and the world beyond, began to count.

Now the town and its people have come again into their own. The oil industry, booming on all sides, has invaded New Orleans, with new skyscrapers for offices and thousands of new employees (page 157). Oil derricks looted out into the Gulf in a new frontier of sea-going drilling operations. Within a 100-mile radius of the town oil flows from some

60 fields, where 3,000 or more oil and gas wells are already sunk (page 177).

Since World War II, investments in new or expanded industrial facilities in the area have reached nearly \$700,000,000, almost half of it in one year. The "oversupply of moisture" about which Orleanians have chuckled has proved a boon in drawing industries that require a great deal of water. International Harvester has erected a \$4,000,000 twine mill on the river front, to employ 750. Kaiser Aluminum & Chemical Corporation has purchased 280 acres on the Mississippi for a \$150,000,000 aluminum plant, eventually to use 2,250 workers (page 182).

Chrysler Corporation of Detroit is moving in with a multimillion-dollar contract to produce air-cooled Continental V-12 engines for Army Ordnance. The Delta Match Corporation, subsidiary of a Swedish match company, has completed a \$2,000,000 plant, the deep South's first wooden match factory. And near the city Pan-Am Southern Corporation is embarking upon a \$9,600,000 expansion program, including erection of a "cat cracker" for high-octane refining.

New apartment facilities, badly needed, are going up; so are new hospitals and expansions of hotels. Industry is undergoing further diversification. The port itself is re-emerging as the country's second in dollar value of foreign commerce; today it boasts more traffic than New Orleans ever knew before.* From the bayous and lakes pour millions of dollars in crabs, shrimp, muskrat pelts.

Cotton, rice, and sugar cane provide work and cash for other thousands of people. The Chamber of Commerce talks proudly of the fact that New Orleans gives the country a sizable supply of its men's summer clothes; that the area has one of the world's largest sugar refineries and produces much of the Nation's industrial alcohol. The world's greatest cane-syrup plant operates near by.

In a word, sir, New Orleans is doing all right.

The Color Does Not Fade

Yet, in spite of these glossy statistics and these facts in italics, the old place maintains its identity and its coloration. Some lushnessmen, to be sure, with a blind eye to the historic, are still bent on "modernizing" the town. Nevertheless, only a few echo the reckless gentleman who announced he would like to set fire to the whole French section and replace it with "brand-new houses."

The heart of this French area, of course, is the Vieux Carré, which stretches below

Fresh Immigrants from Europe Flow Through the Racial Ghetto of New Orleans

Thousands of Europeans are daily pouring through the racial ghetto of New Orleans, which is known as the French Quarter. The French Quarter is a small section of the city, but it is the center of the city's life. It is a place where the new immigrants from Europe are welcomed. The French Quarter is a place where the new immigrants from Europe are welcomed. The French Quarter is a place where the new immigrants from Europe are welcomed.

Canal Street, the main artery of the city, but the heart of the city's life is centered here, where the new immigrants from Europe are welcomed. The French Quarter is a place where the new immigrants from Europe are welcomed. The French Quarter is a place where the new immigrants from Europe are welcomed. The French Quarter is a place where the new immigrants from Europe are welcomed.

French Quarter Back in Style

Recent years have brought a new revival of interest in the French Quarter. The French Quarter is a place where the new immigrants from Europe are welcomed. The French Quarter is a place where the new immigrants from Europe are welcomed. The French Quarter is a place where the new immigrants from Europe are welcomed.

French immigrants, many of the old-time Creoles, have stayed quiet in their homes, leaving the new immigrants to take over the French Quarter. The French Quarter is a place where the new immigrants from Europe are welcomed. The French Quarter is a place where the new immigrants from Europe are welcomed.

In the French Quarter, the new immigrants from Europe are welcomed. The French Quarter is a place where the new immigrants from Europe are welcomed. The French Quarter is a place where the new immigrants from Europe are welcomed. The French Quarter is a place where the new immigrants from Europe are welcomed.

Of about the same size as the old-time Creoles, the new immigrants from Europe are welcomed. The French Quarter is a place where the new immigrants from Europe are welcomed. The French Quarter is a place where the new immigrants from Europe are welcomed. The French Quarter is a place where the new immigrants from Europe are welcomed.

171

Orleansians Want their Cherry-Colored Blaise Strong, and Free-flowing

There is a certain charm in the Frenchman's way of life, and in the Frenchman's way of building. The Frenchman's way of building is not only a matter of style, but of substance. The Frenchman's way of building is not only a matter of style, but of substance.

20. Both have monumental air, low and magnificent stairways inside (page 52).

But here too the French influence is evident; the second floor is reached by a grand and iron-worked balcony. A few years later Orleans took on the oddly contrasting French mansard roofs. The buildings are as New Orleans was Spanish, with a French head and a mixed middle.

Sidewalks Are "Banquettes"

Along nearby Chartres, St. Philip, Duval, and other quarters meet some of the oldest buildings of New Orleans, made 1850. A low, one-story house, with *cloîtres entre poteaux*, bricked between posts, with exposed rafters to strengthen the structural soft brick. Dating back to the late 18th or early 1830's, this house low, sweeping roof at back and front and serves as a study in modern store or bath; old-time Orleans is all over in such economy and convenience.

More elaborate are later stuccoed brick

structures, two-storied or higher, centered about their courtyards, with an outer wall that rises on a line with the sidewalk. In New Orleans, incidentally, only a variety call it a sidewalk; here it is a *banquette*. Enclosed, with long windows and doors to admit the air to flow through, the banquette's surface is a wide, smooth, paved surface of privacy: the family lived and still lives in a house with a paved walkway into the garden and flowering yard.

The banquette, the French call it, has run the gamut of the city's history, from a great deal of the city's history. Here the Frenchman's life is a study in the city's history, from a great deal of the city's history. Here the Frenchman's life is a study in the city's history, from a great deal of the city's history.

When you see a house, you see a study in the city's history, from a great deal of the city's history. When you see a house, you see a study in the city's history, from a great deal of the city's history.

Four to twelve acres have been under the program's program since its tropical debut. Here in its sun-drenched living room a family may have its morning play while a bird swings in an elaborate carpentry and a dog sleeps on the shady floor.

Greek Temples Have a Creole Trim

From a high tower or balcony the visitor may look down on part of one of the new town areas reminiscent of Times. Wall paper is hung against walls, each house is painted to suit an individual idea of white, pink or purple and yet there is a fundamental harmony, a sense of adaptation to scene and weather.

Branching out from the Vieux Carré, streets and houses led sources of social change. North Riverfront at the edge of the Quarter, has a

tional few iron-balconied structures and white-columned ones standing uncomfortably among jailing stations, hot-dog stands, and bars. St. Charles Street, which soon became St. Charles Avenue, was a main thoroughfare of Anglo-Saxon advance, with Magazine and Camp, Carondelet and Baronne as auxiliaries. Along them still remain white or slightly grayed houses that bespeak the non-Creole civilization.

Here begins the rule of the neoclassic, suitably modified by New Orleans climate and French-Spanish influence. Though Mr. Johnson might not be on speaking terms with Monsieur Jean-somme, he or his architect liked the local use of ironwork, and it soon appeared between the pillars of his Greek temple. Near a fluted Corinthian column he placed a two-story gallery in Creole manner; inside, too, the arrangements had a look of Creolism.

Greek Revival—with Gardens

About Lafayette Square and Annunciation Square rose a line of mansions of increasing elegance. Many have gone; some stay on. For more than a hundred years Lafayette Square has been dominated by City Hall, often termed one of the finest examples of Ionic temple style to be found in America.

Then, beginning at Jackson Avenue, starts the Garden District, heaviest concentration of buildings in the Greek Revival mode, the "American answer to the French Quarter."

These Anglo-Saxons wanted no lines of close-built houses rising from the *banquette*, facing the courtyard in the back. They had land, and they were going to use it as they would have done elsewhere—home in the center, surrounded by lawns, trees, and flowers and fronting toward the street itself.

There emerged as a result the biggest residences New Orleans has seen, some wood, others brick, painted white or gray or in shades of color, often occupying half-squares or more. Varying in details, they shared a general pattern.

Wide galleries made it possible to keep many doors and windows open through the frequent rains. Rooms also were adjusted to the locale, sometimes 16 or 18 feet high, with folding doors to be thrown open to provide double chambers. Broad halls, marble mantels, paneled outer doors with sunlights and pilasters of their own provided further finish to a design for commodious living.

The surroundings gave the section its final flavor, with thick oaks that trailed branches toward iron railings, vines climbing up the pillared galleries, and flowers against the iron fencing that surrounded the property. Magnolias were planted, pecans and palms, crepe myrtles held clusters of pink blossoms, with

swart olives and figs among the rosebushes that seemed to thrive especially in this rich soil. It was, in truth, a district of gardens.

From tranquil houses like these there once went forth white-faced men to engage in exercises in legalized murder—*affaires d'honneur*. Nowhere in America was it easier to be killed by sword or pistol. A dozen duels a week in a favorite meeting spot were only average. A lawyer of French background declared he had been a principal in 24 of them and listed them all. An American, jealous of his standing, brought his own total to 20. One fought three duels with the same rival.

In the eyes of many, a man had not really reached maturity until he had fought a duel. Once, hearing a noise, an individual looked in the direction of a stranger and was challenged to a meeting because of his "insulting attitude." A new arrival expressed an unfavorable opinion of New Orleans coffee; on the fifth of the next day, he felt a sword through his middle. A newsmonger in a restaurant, sitting near a fencing master, by chance ordered the same three courses as the latter. The master decided he was being mocked; a little later he sent the fellow to his grave.

One or two New Orleans authorities published manuals of dueling etiquette—how to give offense politely, how to be offended with dignity, how to kill or be killed. Too much vulgarity on an offender's part and there should be no meeting. A man who did not know how to insult properly was no gentleman and no one should deal with a social inferior.

Swaggering lords of the scene were the *maîtres d'armes*, swarthy men who gave instruction in Exchange Alley. About 50 of them operated rival establishments. To be one of the circle was to enjoy the combined glory of *matinée* idleness, leading tenor, and military hero, with the cafés as a stage.

Death Under the Oaks

Over the generations, favorite dueling spots changed from one outlying point to another. Eventually the best patronized became a section of Allard Plantation, where stood a row of gnarled moss-draped trees, the "Dueling Oaks." Under these gnarled branches curious onlookers, drawn by grapevine word, assembled to watch as the duellists' seconds took their positions.

Orleansans recall Emile La Sère, who counted 18 duels but never maintained his anger for long. If his adversary survived, La Sère turned sympathetic. He would help bandage him up, take him home, and sit for nights at the bedside.

The natives tell also of Pakenham Lettline, who swore he had been treated discourteously

Horns, Drums, Piano, and Shuffling Feet Sing Music's Ode to the Night

THE street scene in the heart of New Orleans at night is a scene of life and motion. In the streets of Frenchmen, the revelers are heard to shout and sing. Here, the music of the horns and the piano, the shuffling feet of the New Orleans dancers, the sound

at a public dance. Since there was a large board of managers he could not choose whom to film. So he put all the names into a hat. LeBlanc was a great drelist; the last one he chose, a tyro. But the "victim" shot him, and LeBlanc sank dead.

The most lusty of New Orleans drelists, however, was Jose (Pepe) LeBlanc, who is said to have killed so many that he lost count. A gentle soul, he never duelled except when strongly provoked, or—well, perhaps to offer a friend. Pepe had many friends.

The points at which many duels had their epics, the cemeteries, are places that some would call the strangest in New Orleans's strange life. Cities within the city, the cemeteries are a part of the life of the city, and it is not inappropriate. In this region of a high water table, burial has generally not been underground but above it, in tombs or groans of tombs that suggest narrow residences, with peaked or rounded roofs, ranged along lines of streets.

Like the New Orleans houses, these tombs

are very often of brick, stuccoed or white washed. They have iron gates, all iron or ironwork, and are often metal garden chairs and benches. Many of the families frequently visit together in the tombs, and sometimes for long periods. They are here to pay their respects to the dead, to ask, and to find the ways of showing respect than to beat your head against the wall.

Mark Twain thought New Orleans's tombs the city's "only real architecture." Not too tactfully he suggested that the people would be better off if they "lived as nearly while they were alive as they do after they are dead."

One Virtue Too Many

Here, as in other things, the Orleanians use their imaginations. The result is a profusion of sculpture—carved temples, soldiers, sphinxes. One lady wanted the Angel of Death "looking pleasant."

At the best-known American cemetery, Metairie, can be found an expanse of lagoons,

bridges over canals, and magnificent vaults, not least the much-talked-of shaft ordered for Mrs. Moriarity, with the four ponderous female figures which surround it.

The sculptor stared, according to the story, when the widower Moriarity demanded these "four virtues." "But there are only three virtues," he protested.

"I don't care—I want four."

He got his four, and to this day New Orleans calls them Faith, Hope, Charity, and Mrs. Moriarity.

Oddly related to the cemeteries is the subject for which New Orleans is as celebrated as any other: jazz. Many of the musicians who began to experiment with it and later to popularize it used to play for Negro funerals. On the way to the burial they would offer conventional numbers, such as "When the Saints Go Marching In." But, coming home, they would switch to Brelier rhythms and brisker tempos.

Strange Noises from Basin Street

Long before the close of the last century "the jazz hit," though it was hardly called that, stirred in and around the river city. These were not the sounds that arose in the elite white courtyards of Royal Street or in Garden District drawing rooms: they had little clear suggestion of French and Italian arias heard at the opera houses, or of work tunes of the sugar fields, or even of African voodoo rhythms that the Negroes beat out in Congo Square. Yet they took something from each source, and into the night went the wail and pound of the new music.

After the war with the North the Negroes found that freedom meant also the right to express the songs that were in them. Reaching out happily to any instrument at hand, they played as the spirit moved them. Few could read music, but what did that matter? They made it come out their own way. Told he ought to learn to follow notes, one New Orleans jazzman asked, "But what would we do when the lights went out?"

The origins of a few early songs can be traced. "Tiger Rag" probably grew out of a French quadrille. An operatic number provided another inspiration; a chant of rice handlers yet another. The jazzmen played anywhere a job opened: the restricted district, with its scores of dives outside the French Quarter, or at private parties, cabarets, and lake-front picnics at outlying Milneburg—which gave rise, incidentally, to the classic "Milneburg Joys."

Reddy Badden, Jelly Roll Morton, Buck Johnson, King Oliver . . . The lists of jazz musicians are long, but high as any of them stands Louis (Satchmo) Armstrong, composer,

singer, trumpeter extraordinary. Many think New Orleans would have served America's popular culture well had it done nothing except to provide jazz—and Satchmo.

Next to New Orleans's music the Nation might justifiably rank its food. When a Creole enters heaven, they say, he asks St. Peter where he can find the jambalaya. If he gets none of this strongly accented combination of shrimp, oysters, tomatoes, rice, and other items, he sulkies over and inquires about food customs in the other place.

The town has long been a source of gastronomic joy, a place that frowns at the counting of vitamins and warns a diet. This is no spot for a New Englander who favors a boiled dinner. The citizens are repelled by the pale art of the white sauce, or by the salad compounded of raw carrots and prunes stuffed with marshmallow whip. New Orleans prefers the pungent touch, the delicate "lift" of aromatic herbs. And it has always been as quick to "Bravo!" a good cook as a good tenor.

For cooking is not simply southern, nor that of coral French Louisiana, nor entirely Gallic or Spanish, Negro or Indian. Yet it has elements of all of them, plus something best identified as "of the lowest Mississippi."

From the French the cuisine derived a basic flavoring, a delicacy of taste. To this the Spanish added fragrant spices and concocted pungent combinations; the Indians contributed roots and herbs; the Negro, skill in mixing mouthwatering ingredients. Seasoning is there, but only in degree, a seasoning rather than a handful.

Crabs Shed Shells for Epicures

From the marshes and swamps, the river and the Gulf come fish and game, shrimp, oysters, crabs, and, not least, crawfish (in Louisiana the word is never crayfish). They go into soups, stews, bisques, court bouillons, bouillabaisse, with rice, potatoes, or other vegetables, and then, equally important, the indispensable herbs and spices—bay leaf, thyme, parsley, peppers, cloves.

Crabs are eaten hard-shelled, cold or warm, after being boiled in spiced mixtures, or else in stews and soups and salads. Foremost to some, however, are the crabs in their soft-shell phase, caught after they have shed and before they can reacquire armor plating. Broiled or fried in a buttery sauce, these tender crabs are eaten down to the thin shell and crisp claws.

Years ago Louisiana fishermen began to scoop up such crabs in their foul fat boat, when they prepared to shed the hard shell that had grown too constricting. Working carefully, the men pulled off the old coverings, and there lay the succulent delicacy. The

★ Thousand-pound Piv of Aluminum May Soon Become Airplanes

Planned to build the Kaiser Aluminum Corp. in the great new plant, the world's largest aluminum plant, is being built. It will be the first plant in the world to produce aluminum in the form of a solid metal, and it will be the first to produce aluminum in the form of a solid metal.

✦ United Fruit Company Unloads Green Bananas from Honduras

Stored in the great green banana plant, the United Fruit Company is the largest banana company in the world. The company is the largest banana company in the world. The company is the largest banana company in the world. The company is the largest banana company in the world.

Orleanian who does not consider you an epicure will not waste this delight on you.

In the best New Orleans cuisine there is continuing adjustment and adaptation. Though my family is of Irish descent, the present generation grew up on gumbo and other French-Spanish dishes. We like jambalaya as thoroughly as any Creole; yet we also enjoy that stuffed artichoke, as well as an emphatic crab mixture suggested by a Dalmatian friend in the lower delta. Since one family branch is German, we have long appreciated pot roast and noodles. Yet in the main, whatever goes onto the stove emerges with a strong Creole seasoning.

Any listing of restaurants is a catalogue of personal preferences. Antoine's, superlative for generations, is notable in one man's opinion for oysters Rockefeller, of course (page 155), but also for oysters Ellis, a casserole containing them with black mushrooms, and a pronounced brown sauce with a fish base. Calatoire's, a place that hundreds of natives consider their favorite, is celebrated for a *plat de viande Marguery*, a trout smothered (happy death!) in a comparatively bland covering with shrimp, mushrooms, and hollandaise sauce.

Brennan's, increasingly popular of late, offers an imaginative "appetizer" of mixed baked oyster specialties—Rockefeller, Robinson, and Bienville—with snails or shrimp in the center. Arnaud's is memorable for such dishes as roast of turkey *en papillote*, a rich yellow concoction imprisoned with steam and aroma inside a paper bag.

But the roster can quickly grow as long as a Broussard menu. Commander's, L'Esca, La Louisiane, Cuirre D'anner's, Joset's, Tujagues, Mandel's, Kolba, Salafant's, Jimmy Moran's—I think no gourmet, no matter how rare his palate, will starve in New Orleans.

The Unbelievable Mardi Gras

It is the Mardi Gras, however, which means New Orleans to millions. It's the fastest, loudest, most absurd, most magnificent thing in the city. It may be regarded as a state of mind, something that pervades the air and gets into the Orleanians' bloodstreams. The stranger protests: "I don't believe it, but there it is!" (Pages 159 to 163.)

It comes from France, a celebration that goes back to the pagan rites of spring, which the Christian Church took over. Sometime in Louisiana's French period, natives remembered, first, the custom of balls, and then the custom of dancing and masking. Creole youths returning from Paris decided to liven things up and led files of costumed masqueraders past women who threw roses from the balconies.

Observance of Fat Tuesday—Mardi Gras—varied with the years. From time to time,

during political unrest, officials frowned on the dangerous custom of masking, and now and then the street doings got out of hand. But gradually the celebration became an accepted institution, until today it seems forever embedded in the New Orleans way of life. Stop Mardi Gras? Most Orleanians would think it worse than abolishing Santa Claus.

The Carnival season is two things in one—a system of private entertainments arranged by "krewes," or organizations of men, with kings, queens, courts, and tableaux; and then a public occasion, in which anybody can join and practically everybody does, with his cousins from the bayou and his friends from St. Louis, Richmond, and New York.

Season Runs from Christmas to Lent

Christmas is hardly over when the season starts, to continue for two months, more or less, depending on the date when Lent brings Carnival time to a close. Night after night various krewes have their shining balls and processions behind closed doors. The momentum gathers, and sometimes the Municipal Auditorium finds two organizations in celebration, one on each of its sides, with thousands assembled to dance or watch.

To be a queen . . . For some debutantes, and their mothers, fathers, cousins, friends, and enemies, it is a matter of a lifetime's yearning, prayers, and despairs. The number of Carnival krewes has increased fantastically in recent years, yet the supply of queenships is never enough.

Some families slave off creditors for years while working and saving for what may be their daughter's supreme hour. Papa may go broke a week later, but for the rest of her life the girl will have her shimmering gown to display, her crown and scepter, and the memories that she will pass on to her children and grandchildren.

In the older organizations the choice of queen is determined by family tradition, social standing, wealth, business affiliations, personal obligations. Mardi Gras has its own royal inheritance. Often when a candidate's mother has been queen, it is understood that the daughter too will eventually rule the krewe for a night. Gowns will cost thousands, and there may be long instruction so that Miss Queen will walk with a truly regal air.

Each krewe also has its king, and though among the men there is less heated rivalry and less burning anticipation, nevertheless it may mean a great deal in general regard to be known as Carnival royalty. Rex is the monarch of monarchs, officially king of Carnival kays, and the city is his for the day.

As Fat Tuesday itself approaches— it falls on February 17 this year—the tempo of the

Embattled British and Malays Fight Red Terrorist Guerrillas,
but Keep Vital Rubber and Tin Moving to the Free World

By GEORGE W. LONG

With Illustrations by National Geographic Photographers J. James Roberts

"**R**EAD this," said the director of a large British rubber company in Malaya. "It's a letter from one of our plantation managers. Gives you some idea of what we're up against out here. Reports like this are routine these days."

Taking the paper, I read of a hit-and-run raid by Red terrorists—of rubber trees by the hundreds slashed, equipment smashed, trucks burned, and workers intimidated. Tersely the final paragraph announced:

"We deeply regret to advise that Mr. W. A. Piddcombe, our assistant, was murdered by Communists this morning."

Grim Half-war Grips Malaya

Such incidents, multiplied by thousands, make up the grim half-war that has gripped Malaya since mid-1948. With typical understatement the British there call it simply the "Emergency."

In the dense jungle that blankets four-fifths of this lush, productive country lurk some 5,000 lattered and tough Communist guerrillas. They aim to wreck the country's economy, create chaos, and take control.

Swift, elusive, quikly swallowed by the jungle, the terrorists are everywhere and nowhere. Surprise, sudden death, and gangster terrorism are their weapons. Striking against Asians and British alike, they ambush traffic, derail trains, attack villages, murder, burn, and rob.

The Reds' prime targets, the war's "front lines," are Malaya's rich rubber estates and talukas (r mines). Planters and engineers, wearing side arms and getting about in armored automobiles, live and work in death's shadow. Somehow, despite the Emergency they manage to produce a third of the world's natural rubber and more than 35 percent of its tin (pages 187, 227).

In the steady flow of these vital resources lies Malaya's vast importance to the free world.

About the size of New York State, Malaya shares Southeast Asia's long Malay Peninsula with Thailand. It is a country of dramatic mountains clothed in jungle green, of palm-fringed beaches, idyllic thatch-roofed villages, bustling towns, wild rivers, monsoon rains, tropic heat, and enervating humidity. At the southern tip of the peninsula, like a

pendant, hangs the modern island city of Singapore (map, page 189).

On a visit to Asian trouble spots, National Geographic photographer Joseph Bayler Roberts and I flew to Singapore after a tour of embattled Indochina.* As our plane circled the city, we saw scores of freighters dotting its spacious anchorage. This strategic Crown Colony is still the busy "crossroads of the East."

But in Singapore the Emergency seemed remote, although it flled the city's newspapers. Chief topics of conversation were business and money. Tight knots of serious men discussed the price of rubber, so important to Malaya. War in Korea had inflated rubber to five times its early 1950 value. When we arrived, the balloon had just burst and the price was sinking fast; later it steadied.

For a close-up look at the Emergency, we journeyed into the strife-torn Federation of Malaya and then returned to Singapore. With us went British-born James Taylor, a veteran planter. Early in the twenties "Jungle Jim" began working on Malayan rubber estates. He became an American citizen in 1948 and hunted wild rubber in the Amazon's upper reaches during World War II. When the Japanese invaders left Malaya, he returned. Jim can't stay away from rubber long.

Although friends looked doubtful and shook their heads because of the "ranger," we drove from Singapore to Kuala Lumpur, the Federation's capital, without incident. We found K. L., as it is called, a bustling city of 200,000—British colonial city, Malay village, and Chinese town rolled into one (p. 188).

Jungle "Comforter" Shoots Lead Slugs

To see a rubber plantation under the Emergency, we drove from K. L. through rolling country to the 1,700-acre Tian Mee estate. Rubber trees in orderly rows marched beside the curving road for miles. Jungle, wild and forbidding, lined our route in places. Quietly Jim laid his "comforter," a '45 automatic, on the seat beside him.

* See in the NATIONAL GEOGRAPHIC MAGAZINE: "Indochina Faces the Dragon," by George W. Long, September, 1953; "Portrait of Indochina" by W. Robert Moore and Maynard Owen Williams, April, 1951; and "Stateless Indochina," by W. Robert Moore, October, 1950.

Rain Water Fills Abandoned Mines and Digs the Tin-rich Kinta Valley with Lakes

Abandoned mines and ditches in the Kinta Valley, Malaya, are filled with water, and the water is so pure that it is used for drinking. The water is so pure that it is used for drinking. The water is so pure that it is used for drinking.

"We used to start tapping the trees at 5 o'clock," Harold told us. "Latex flows better then. Now it isn't safer; terrorists are often out before dawn."

Inspecting the estate, we followed milky latex, life-blood of Malaya, from tree to house. We watched latex rollers unroll sheets, which were then hung like laundry on trolleys and wheeled into the smoke-house (page 206).

"Emergency or no emergency," said Harold "we sell a ton a day through here. The work's all done by noon."

On the way back to Kuala Lumpur we stopped with Harold at a neighboring oil-palm plantation and enjoyed the open-hearted Scottish hospitality of Mr. and Mrs. Pat Stewart (page 192).

Capital Reflects the Emergency

Downtown K. L. surprises visitors with its modernistic office buildings, big department stores, movie palaces, and heavy, swirling traffic. Mosquelike Government buildings, built on Moorish lines, impart a Near East look. Fine homes and official residences crown hills in the city's suburbs. Stands of rubber and the yawning pits of tin mines hem in the fast-growing city.

The capital reflects Malaya's Emergency. Armored military vehicles rumble through the streets, motorcycle couriers roar past on official business. High overhead jet fighters streak the sky. Planters with side arms park steel-plated Fords on Batu Road and meet old friends for food and drink at the Coliseum. Talk centers on the latest "incident" or the price of rubber.

In lofty King's House I discussed the Emergency with Britain's High Commissioner and military commander in Malaya, General Sir Gerald Templer.

"Make no mistake," he said. "We're not suppressing a nationalist revolt in Malaya. This country is a vital front in the war to hold Southeast Asia against communism.

180 Drawn by Edward Ellis and Victor J. Kiser

Malaya and Singapore, Rich Prizes, Tempt Red Plotters

About the size of New York State, the British-ruled Federation of Malaya has 5,500,000 people, of whom nearly 40 percent are Chinese. Rubber and tin give the country an importance far beyond its size. At its tip lies the island of Singapore, a Crown Colony with its own government.

Britain hopes to lead Malaya along the road to responsible self-government, and in spite of the Emergency we've made a good beginning. Recently some three-quarters of Malaya's people were granted federal citizenship. "Toughest nut to crack is the racial problem," he continued. "There are almost as many Chinese as Malays in the country, and a sizable group of Indians and Pakistanis. About 95 percent of the terrorists are Chinese. Behind the lighters is a big Communist underground called the Min Yuen, which keeps them supplied with food and money. They're the real enemy, for without them the terrorists could not exist."

"Who are they? That's what we'd like to know. Information is our big problem. Many Chinese bravely resist the Communists, which is why the terrorists kill more of their own

race than any other. But terrorism keeps mouths shut.

"Most successful action by our security forces comes as a result of tips. Information we must have. I'm trying to do something about it. Come around tomorrow and see."

I did, and watched rain-soaked British and Gurkha troops haul boxed ammunition cases and wooden boxes into King's House.

"What's up?" I asked a reporter.

"Operation Question," he answered. "Day before yesterday soldiers delivered letters to the heads of families in five picked villages in the Federation, letters asking for information about the Min Yuen. Later they were collected, sealed and unsigned, and brought here."

Headmen of the villages, in native dress, lugged the cases to a table. White flash bulbs popped. Sir Gerald and his staff opened them and stuffed the letters into pouches (p. 210).

Later I talked with admirable Col. Arthur Edwin Young, Malaya's No. 1 policeman, trained by Scotland Yard.

"Large-scale military action in Malaya is useless and almost impossible," he told me. "Doubt if an army of ten million could end the Emergency. The terrorists would merely fade away temporarily—hide deeper in the jungle or bury their arms and join the civilian population. We use Army units in addition to the RAF and Navy, and the Australian Air Force is lending a hand. Primarily, however, the situation calls for police action."

"Our basic problem here is to provide security, the job of any police force. And that we have not got in Malaya—yet. Most of the people, including the Chinese, are on our side, but terror keeps many from cooperating. There's a long, hard struggle ahead, but we've reason to be encouraged."

"We have a force of 75,000, more police than the United Kingdom has with ten times Malaya's population. But don't think of them all in terms of British bobbies or your American policemen. Five thousand are specially trained to track down and kill terrorists deep in their jungle hide-outs. Like to see some of them train and operate?"

Self-discipline Makes Jungle Police

In Sungai Buloh, near K. L., we watched jungle police recruits drill (page 193). A leather-lunged drill sergeant kept marchers hustling; perspiration streamed down faces and dripped khaki shirts. Whenever stragglers made a slip, they berated themselves aloud. Some beat their shoulders with rifle stocks, while others broke ranks and jagged several laps around the field.

"Malay recruits take drill seriously," our officer guide said, "and no nonsense."

In Serdang we visited an operating jungle police company, old hands at this grim hide-and-seek warfare. Wall charts in headquarters—complete with names, outlined the organization of the local Communist Party and the Min Yuen. A group photograph showed an enemy unit posed like a college varsity.

"We found that on a dead terrorist," said the commanding officer, D. C. G. Mole. "Front end center is our No. 1 enemy, a clever Chinese we call the bearded wonder."

Terrorist Bands Now Shrinking

"Surrendered terrorists keep the charts up to date. A few years ago we met bands of terrorists around here as large as 300. Something to shoot at then. Now their strength is down in this State, and they've had to break up into squads as small as 10. Our job is to keep after them and prevent them from gathering for a large operation."

"We've noticed signs that their morale is slipping. Some of these chaps, counting the time they fought against the Japanese, have lived hunted lives in the jungle for 8 out of the last 11 years. Now, with their men operating in small groups, top Communist commanders can't maintain discipline. So voluntary surrenders are on the increase."

"Just the other day a pair of terrorists gave themselves up. When they found that they weren't badly treated, they offered to return to the jungle and persuade their comrades to come in. We took the chance, and they brought in 10 more."

A sergeant spoke to Mole.

"Right," the officer said. Then to us, "A bit of a show down the road. Let's go."

Driving, we followed a winding dirt road through hilly jungle. Abandoning the car, we started hiking. Suddenly our guide halted and said, "Better take shelter. Here."

Mole and I crouched in a ditch behind a No Trespassing sign; Joe and Jim took positions near Ly. Gnarled, abandoned rubber trees and a covering of underbrush climbed a hill on our side of the road, thick jungle screened the other. I noticed the butt of a "comforter" protruding from his hip pocket. In silence we waited.

"Look," my companion whispered.

I looked, and saw a squad of men in jungle-green, rifles ready, creeping single file through the underbrush. A burst of rifle fire rattled from the hilltop; as one man, the squad hit the ground and froze.

It didn't stay frozen. A Bren gun chattered, phosphorus grenades boomed over tree tops, and crouching figures, darting from tree to tree, charged up the hill firing. Suddenly all was quiet again.

"Less than two minutes' elapsed time," Mole

Malay Police Track Red Terrorists on Jungle Trails Where Sudden Death Lurks

Heavy rain and darkness have helped Communist troops to ambush police and police in the Malay jungle. The rain has also helped the Communist forces. These men operate from Kuala Lumpur jungle.

Learning to Live Long from Sen. John's Chinese Wisdom

Block after Block, Singapore's Pappy Spaces Are Fast Disappearing. Government Wants to Build Western-style Apartments

Singapore's tiny island has long been a place where people live close together. More and more, however, the government is pushing for a change. It wants to build Western-style apartments, which are much larger and have more space. This means that the old, small, and crowded blocks will be replaced by new, modern buildings. The government says this is necessary to meet the needs of a growing population. But many people are worried that this will destroy the unique character of Singapore's neighborhoods.

4. Top Spinning Requires a Man's Muscle

Many of the same problems exist on a regional and national level, although the specific symptoms are different and some of the proposed solutions are different. Some have had little success and others the opposite. The following table

It is important to note that the above results are based on the assumption that the system is in a steady state. In practice, the system may be in a transient state, and the results may differ. For example, if the system is in a transient state, the results may be different from the steady state results. Therefore, it is important to consider the transient state when analyzing the system.

■ **Y**our first step is to find a business to sell. There are many ways to do this. You can search for businesses for sale in the Yellow Pages or on the Internet. You can also ask your friends and family if they know of any businesses for sale. Once you have found a business, you need to do some research. Find out how long the business has been in operation, how much revenue it generates, and what its expenses are. You also want to find out who the owner is and why they are selling the business. If you are satisfied with the business, you can make an offer to buy it. If the owner agrees, you can complete the purchase and start your new business.

Continued on page 216

said as we straightened up. "Not bad. What you saw was Operation Ambush, a training exercise. Hidden terrorists often fire down slopes like this at our patrols. Grenades and the Bren gun are supposed to pin them down while our flankers circle and charge them from the side. It's old stuff, but effective."

On the way back our guide said: "Imagine what it's like hunting terrorists in the deep jungle. This is comparatively open scrubland here. In some areas a man is invisible at 20 feet. You can't see an enemy until you step on him. Often a patrol's daily progress is measured in yards instead of miles. Heavy rain, leeches, jungle rot, and the feeling that an unseen terrorist has you in his sights make the whole business rather awkward. I suppose it's like Indian fighting in America long ago, only worse."

Outside K. L. and in other parts of the country I saw Malaya meeting its Emergency in another way. It had more to do with ballots than bullets, building instead of destruction, a new mode of life rather than sudden death. It's changing the face of the land and the daily lives of almost a tenth of Malaya's people. "Resettlement" is its undramatic name.

Before World War II, but especially during the Japanese occupation, thousands of local Chinese and others became "squatters"—moved away from towns, built homes, and carved out small farms on public land on the jungle's fringe. Isolated, they became the prey of terrorists, who exacted food, supplies, and information from them.

New Lives for Half a Million

Malaya began the Herculean task of moving and resettling 500,000 men, women, and children, their homes and belongings, in 1950. It's as if the population of Buffalo, scattered over New York State, were moved with houses and possessions and consolidated into 400 odd new villages.

When I was in Malaya the bulk of the resettlement job had been broken. In addition, thousands of nonsquatters had been regrouped for safety, their homes in outlying areas pulled into already existing villages. Rubber estate and tin mine workers were also regrouped, at their employers' expense. In all, 425,000 persons had been resettled or regrouped.

Miles of barbed wire fences, protected by watchtowers and often lighted at night, encircle both new and old villages. Malaya reminded me of Indochina with its fortified towns, or our own early Wild West with its stockaded settlements. Completely free by day, jobholders and farmers go to work in the morning but must be inside fences at curfew

time. The barbed wire is not so much to keep villagers in as to keep Red agents out.

Communists labeled the new villages "concentration camps," and at first many people were loath to move into them. Now many nonsquatters petition the Government to become new villagers. I found out why when I visited the Federation's largest resettlement village at Jinjang.

"Resettlement's a major revolution in the lives of new villagers," its English-educated Chinese director told me. "Squatters lived hard, primitive, lonely lives. Now village life gives them a new outlook and advantages they never knew existed. Let's look around."

Crossing the straight gravel streets of this widespread town, I passed hundreds of small, neatly spaced homes, no two alike. Some were crude, others more elaborate, many reflected individual pride of ownership.

Movies and Piped-in Music

Near the town's center I saw an imposing brick movie theater, primary school, Buddhist temple, Christian church, big open-air market, dispensary, two maternity hospitals, and a community center. Small shops and not a few beauty parlors occupied corner locations in many sections. Vacant lots awaited the building of police and fire stations. Lanterns hung on corner poles for night illumination, and curbside fountains gushed pure water from a reservoir.

Housewives promenaded with tots, carried pails of water on shoulder poles, or conversed with neighbors as their counterparts do everywhere. Men were largely absent—on ten line truck gardens, doing jobs in near-by K. L., or working as tappers, tin miners, or lumberjacks. Youngsters played in streets or small playgrounds.

"There's much to do yet," our guide said. "We plan to build a big secondary school and community playing field, bring in electricity, and establish several new shopping centers. And even that's only a beginning."

"The villagers have almost everything city dwellers have, even piped-in music programs."

"Does the Government do all this?" I asked.

"Most of it. The Malayan Chinese Association, Red Cross, and other organizations help. The people dismantle and rebuild their homes, and Government supplies lorries and labor for hauling. Each family receives a small money grant to get started. Householders get long-term occupation licenses and pay \$2 a month (about half U. S.) for rent."

"New villagers are learning to live together, and a real community spirit is developing. Committees of townspeople run the schools. Some villages elect representatives to work

★ These Monkeys Pick Coconuts

A coconut stand in the heart of the town in the lower town, within easy reach of coconut groves, produces the highest prices. The monkey takes the coconut, cracks it open, and eats the meat. It then takes the shell and throws it away. The monkey is trained to do this by a man who sits on a bench and watches the monkey. The monkey is trained to do this by a man who sits on a bench and watches the monkey. The monkey is trained to do this by a man who sits on a bench and watches the monkey.

with the Government's district officers. First time any of them ever visit.

About 85 percent of the new villagers are Chinese. They are beginning to make friends, on their own plans, exchanging ideas, getting new points of view. Some have joined the Home Guard or are active in other projects."

Captured documents prove that resettlement, with strict food control, has dealt terrorists a telling blow. Food has become their absorbing problem. To get it, they must venture out of the jungle more often, and thus their casualties have mounted. Some have started jungle farms, which are easily spotted from the air. In some districts resettlement has seriously disrupted the underground Min Yuen.

Tin Dredge Digests Mountains of Mud

In the green valley of the Klang River we boarded one of the world's largest tin dredges. Clanking, roaring, floating in a lake of its own making, it looked like a misplaced factory.

High on her "bridge" I watched an endless chain of gargantuan buckets haul up loads of ore-rich mud and, wailing like lost souls, dump them into a giant hopper. Near by a scale indicated that the buckets were digging at a depth of 70 feet.

"They will go down almost twice as deep," said the "skipper," Mr. Edwin C. H. Smith. We raise and lower the ladder they move on according to the contour of bedrock. They bring up a lot of mud, too—enough, even, to mount it so to equal the volume of Pagan's Great Pyramid.

Powered by steel cables and a red, roaring diesel-driven monster, the dredge is about the length of a football field—units of way back and forth across the lake, up and down, advancing about 20 feet in three days. A maze of heavy internal machinery digests the earth load, grading the silt, subtracting and refining the ore until it resembles black sand, and piling the residue astern in huge mounds. Thus, slowly, inexorably, the lake moves forward with its creator.

"The ore, only a small fraction of the tons of mud we dredge up, is about 75 percent tin," Smith told me.

It goes by rail to Port Swettenham and by ship to Singapore, where it's smelted. We get a nice by-product, too—about 20 ounces of gold a month.

When I mentioned the Emergency, the skipper smiled.

"There's nothing bad among us here," he said. "They had a little trouble down the road a few days ago, and there are terrorists in the hills over there, but we haven't heard from them. The worst part's the curfew. Nobody after night our engineers have to be in their own sound at 6 o'clock. The poor chaps find it tiresome."

Singapore Headlines Short Big News

75 years of independence marked the birth of Malaya as a free nation. The day was celebrated in Singapore and other parts of the Federation. The celebration was held in the State of Pahang.

same. I live in K. L. myself. Haven't had any trouble, but there's a lot of trouble in the world, especially in Malaya, and the world expects to see more and more of it."

Before leaving, we inspected the company's model village, where 1,500 Malay, Chinese and Tamil Indian workers live together in fenced-in security. Neat white aluminum-roofed cottages stood in rows around a central area. Small ponds, stocked with fish, dotted the slick and spartan grounds. For seven months previously this was barred tin workings, like the waste astern of the dredge.

I noticed off-shift Tamils building a small Hindu temple. Other workers were doing chores around home or hanging in the town center. A tiger, cooped in a well-fenced preserve store, where prices averaged 10

Southern for Northerners

There are a number of things that can be done to help reduce the risk of a fire starting in the first place. For example, it is important to make sure that all electrical wiring is up to code and that all electrical outlets are properly grounded. It is also important to make sure that all flammable liquids are stored properly and that all flammable gases are properly vented. Finally, it is important to make sure that all fire extinguishers are properly maintained and that all fire alarms are properly tested.

tribe I thought had never seen a white man. When I arrived, they said, "Glad you've come. Got any fuel for our cigarette lighters?"

Indicating a long hut where several women roosted like hens on door ladders, he said, "They're Kanan people from Johore, the smallest tribe in Malaya, only 34 of them left. They're all here for safekeeping."

We returned to the bungalow, and the doctor switched on his recording machine. Drumbeats and a weird chant filled the room. So did dark shadows that gided in and squatted on the floor. Soon naked bodies were swaying and hands thumping the floor. The doctor's guests, carried away by the magic of rhythms on tape, were home again.

Wild Elephants Pull Up Rubber Trees

Next day we soared above Malaya's jungle-swathed backbone en route to Kota Bharu, capital of the State of Kelantan near Thailand. When we touched down at seaside Kuantan, I struck up a conversation with a white-haired planter.

"Elephants, not terrorists, make life difficult for me," he said. "They delight in pulling up my young rubber trees."

Following the coast, we cruised over miles of palm-fringed beaches. Heart-shaped weirs and Malay fishing craft dotted the waters. Rivers, snaking from cloud-draped mountains, spilled cargoes of yellow mud into the sea. Villages nestled among coconut groves.

Near Kuala Dungun we circled Bukit Besi iron mine, biggest in Malaya. Puffing steam shovels, scooping up rust-red earth, were sculpting the iron mountain. At beachside, lighters took the ore from trucks and passed it to freighters. Destined for Japan, it would end up in Australia as sheet metal.

"These northern States," Jim told me, "are somewhat isolated from the rest of Malaya. Kelantan is the least changed, the most Malay part of the Federation."

"The people are mostly rice farmers, fishermen, or rubber smallholders, and they cling to old customs and costumes. Here it's peaceful and idyllic. You're leaving the Emergency behind for a while."

"And it's a photographer's paradise," he added. "Kelantan costumes are nice for Kodachrome."

Jim hadn't exaggerated. Kota Bharu was alive with moving, changing colors. Exotic fans of the forest trees splashed the town with crimson. Women wore flowered sarongs, gay jackets, and bright head kerchiefs. King Solomon might have envied the men's array, which like the women's, featured gay sarongs and jackets.

With Kelantan's development officer, T. William T. Bangs, a longtime Malaya resident

and a convert to Islam, we toured the town. In a palm-shaded lane we watched a new mobile rice mill thresh mountains of golden grain for waiting farmers. Near by we looked on while housewives prepared hand looms and wove cloth for sarongs (page 201).

In Kota Bharu's arts and crafts center we peered over the shoulders of craftsmen tooling exquisite Kelantan silver. One, a white-capped *hajj* (a Muslim who has made his pilgrimage to Mecca), put finishing touches on a statue for the State Council of Kedah.

"We're dedicating a country bridge this afternoon," Bangs said. "Perhaps you'd like to come along."

We did. Turning off the main highway, our Land Rover followed an obviously new grass-covered road between rice fields.

"This we call a 'farmers' road,'" our guide said. "We have more than 500 miles of them in Kelantan. Farmers give the land and labor; Government, the tools and material. We accomplish a lot that way, cooperatively—bush schools, playing fields, and bridges like the one we're opening today, for instance."

At the bridge a crowd waited. In a temporary lean-to we met local officials, led by a dignified headman, and toasted the bridge with soda pop. At the critical moment it was discovered that no one had brought a ribbon. A young veterinarian saves the day by producing a roll of bandage, which he tied with a professional touch across the bridge. Bangs spoke briefly in Malay and was answered by the headman, who then snipped the ribbon.

"Big things tonight," announced Bangs. "We'll come back after dinner."

Malays Celebrate by Moonlight

Under the moonlight we watched a gay celebration like a country fair. Malay families in holiday gear and mood docked to it from miles around. Booths sold soft drinks, coffee, and snacks.

In one field men and boys, jumping up and down, pounded deep-throated *rebana* drums made of buffalo hide stretched over hollow tree trunks (page 221). When they stopped, exhausted, squatting figures thumped small coconut drums.

Near by, nimble-footed boys thrust and

Palm-fringed Reaches Indent the Shores of Penang Island

Lush, mountainous, and of surpassing beauty, Penang is Malaya in miniature. Rice fields, coconut groves, and vegetable gardens cover the island, rubber trees and jungle cloak the hillsides. Chinese and Malay villages cluster on a scenic road girdling the island.

1. *Chlorophyll* is the green pigment found in plants and algae, responsible for photosynthesis. It captures light energy and converts it into chemical energy.

2. *Chloroplasts* are organelles found in plant cells and some algae, where photosynthesis takes place. They contain chlorophyll and other components necessary for the process.

3. *Chlorophyll* is a complex molecule consisting of a central magnesium atom coordinated by four nitrogen atoms in a porphyrin-like ring, with a long phytol side chain.

4. *Chlorophyll* is essential for the production of glucose and oxygen from carbon dioxide and water, a process known as photosynthesis.

5. *Chlorophyll* is found in various forms, including chlorophyll *a*, chlorophyll *b*, and chlorophyll *c*, each with slightly different structures and functions.

6. *Chlorophyll* is a key component of the light-harvesting complex in photosynthesis, which transfers energy from light to the reaction center.

7. *Chlorophyll* is a natural pigment that gives plants their green color and is also found in some foods like spinach and kale.

8. *Chlorophyll* is a vital component of the photosynthetic pathway, enabling plants to convert light energy into chemical energy stored in glucose.

9. *Chlorophyll* is a complex molecule that plays a central role in the process of photosynthesis, converting light energy into chemical energy.

10. *Chlorophyll* is a natural pigment that is essential for the growth and survival of plants, as it enables them to produce their own food through photosynthesis.

A Mournful Wail from Skipper's Boat's Horn Calls the Fishing Crew to Sea

On this name their craft for sea birds, they take pride in ornate bow panels and tapering prows. Many of the world's great vessels have been built in the United States, and the fishing boats of the United States are no exception.

performed in the Malay dagger, or kris, dance, a stylized version of duels that settled village disputes long ago. Later we watched a toothless veteran show a brash youth a few tricks in the local form of Thailand's hit-slap-and-kick boxing. For both events a string and drum orchestra set the pace, now furious, now slow and rhythmic.

Biggest attraction was the top-spinning contest, strictly a man's sport in Malaya. With motions like a big-league pitcher throwing sidearm, contestants spun 10-pound tops wound with rope. Excited onlookers laid bets on which top would spin longest. The record in this town, we were told, was one hour and 20 minutes (page 200).

Booming Voice from Hollywood

As we crossed a rice field after dark, I heard a voice boom, "I'll bound you out of every island in the South Seas."

Turning quickly, I saw a crowd intently watching a portable movie screen on which villain faced hero in the movie version of Garland Roark's action-packed thriller of clipper ship days, *Wake of the Red Witch*.

"It's curious," Bangs commented. "Malay youngsters prefer the old shadow plays. When they're about 14, the cinema captures them, but sooner or later they return to their first love, the leather puppets on a stick."

On the crescent palm-bordered beach at Perupok we stood with a young Malay fisheries expert and watched the village fleet come home. Nearing shore, boats dropped their patched square sails. Long, sweling combers caught the small craft and hurled them beachward. Fishermen, holding paddles aloft, shouted in exaltation; deftly they maneuvered to perfect landings (page 220).

While housewives bargained and youngsters helped unload the catch, we strolled the beach.

"Perupok has 300 boats," our expert said with pride. "They range from single-man craft to ones with crews of 25 or 30."

"Half the boats go out at dawn, while the rest sail at dusk for night fishing. The big boats use nets; the small ones, hooks. Both catch nicely marketable herring. The season lasts from March to August, when the monsoons begin."

"How far to sea do the small boats sail?" I asked.

He spoke with a fisherman and answered: "The length of time it takes to smoke a cigarette—after the palm trees disappear below the horizon."

We visited another better known beach near Kota Bharu. It had been known for centuries as the Beach of the Fire Ants—until it was bought by an enterprising Malay who built cabins and a dino-and-dance along the shore.

With an eye to business, he quickly changed its name. Now it's famous as the Beach of Passionate Love.

On this pleasant strand with the now enticing name we found Malay couples clad in street clothes sitting sedately under parasols. Bathers braved the surf in full-length sarongs. Children frolicked; a markish dog sat at water's edge gazing out to sea. Down the beach a lone fisherman called his crew with a bass-voiced buffalo horn (opposite).

At a garden party which featured traditional Malay games we met the Hon. A. Frederick William Norton Churchill, British Advisor to the Sultan of Kelantan. Known to friends as "Tony," the B. A. bears a striking resemblance to his famous relative, Britain's Prime Minister.

When I first saw the B. A., he was furiously beating a huge tabana drum, keeping up with the best of the Malays. When we were introduced, he mopped his brow and said, grinning, "Wonderful, those drums. Should have one in my office. When things go wrong, I could take 'em out on the drum!"

Later, as we watched a Malaysian dance, he said: "It's an unusual job, being a B. A. I head a score of committees and organizations around here, from Boy Scouts to the Commission on Dredging and Sanitation, but, like my counterparts in the other States, I've no legal or political power. Peculiarly British. It's always been that way with B. A.'s."

Eyes twinkling, he added in a stage whisper, "We only advise."

Penang, Malaya in Miniature

Air-hopping across the peninsula, we visited the island of Penang, Britain's first Far East possession. Before the British arrived, it was long a favorite haunt of Malay pirates.

By cable car we climbed Government Hill for an over-all look at this "Pearl of the Orient." In all directions verdant hills rolled to the sea. Junks, freighters, and green islets, half obscured by mist, flecked the opalescent waters. The pink roofs of George Town, the island's metropolis, covered a fingerlike peninsula pointing at the mainland.

In a small English car we drove the scenic road that girdles the island. Penang, we discovered on this trip, is Malaya in miniature. Coconut groves, paddies, and vegetable gardens cover small lowland areas; rubber trees and jungle clothe steep hillsides (page 215).

Busy Chinese handcars straddle the road, and Malay villages of carved wooden bungalows stand on stilts among tall, graceful palms.

George Town, with its modern hotels, stores, banks, pleasant suburbs, and crowded harbor, seems a smaller Singapore. Barnacked freighters discharge tons of Made-in-Britain goods

Platted Cottages Walk Out to Sea on Stairs, George Town, Bermuda. Their Towers are Chinese Screens
The Cottages are built on the edge of the cliff, and the stairs lead down to the sea.

and load rubber, tin, and pungent copra for world markets. Out in the harbor junks and lighters swarm like water bugs around anchored ships.

A free port like Singapore, George Town is the two-way funnel through which pours the foreign trade of northern Malaya, south-east Thailand, and to some extent of Burma. When cruise ships call, the port also does a brisk tourist business (page 225).

As we drove past a wild section, our guide pointed to high jungle-covered hills. "That's where our terrorists hang out," he said.

The idea of terrorists on Penang seemed wholly foreign to the island's peaceful air.

"Oh, we have them," he assured us. "They live in caves up there. So far, they've eluded every patrol. Even have a printing press and circulate propaganda."

Terrorists Learn Three R's

Hopping to Taiping in mountainous Perak, we saw Malaya meeting its Emergency with the three R's. There in 1949 the Federation founded a rehabilitation camp for surrendered terrorists and Chinese youth caught flirting with the underground Min Yuen.

"We have 400 here, all Chinese," Mr. Anthony T. R. Jackson, the director, told us. "On the average, they've had only a year or two of schooling. So we stress literacy, the learning of a trade, and citizenship."

With Jackson we toured the camp, which resembled a model village more than a reform school.

"We have educational movies twice a week," he continued. "Other evenings the boys play ping-pong or mah-jongg. In the afternoon we write letters. It's a big day for most of our chaps when they can write home. We let them listen to Communist Radio Peiping, too, if they want to, but nobody does."

In classrooms students rose and said, "Good morning, Sirs!" in unison. One class studied from a text entitled *How Malaya is Governed*. Another struggled with the intricacies of Arabic numbers; each youth had an abacus to check his work. Teachers of both classes were ex-Communist leaders (page 213).

"When they leave here, we write them letters of recommendation and help get them jobs," the director said. "Only about one percent are required to report periodically to the police. We haven't heard of any backsliding yet, and our 'graduates' are a good influence in their communities."

"Most amazing is their loyalty to the camp. About 170 of them came back to a recent reunion. Many retain from all over Malaya just to get the camp's seal on their new identity cards when the old ones expire. It's getting to be like an old school life."

On the way back to Singapore we broke the journey with a short week end in historic Malacca.

Highway traffic on the way, mostly trucks, moved swiftly—no dawdling Sunday drivers here. In places reassuring armored patrols flashed past. From time to time Jim indicated "hot spots" along the road where recent ambushes had taken place.

Roadblocks at towns stopped us; police signs announced "Please stop. Police check. Thank you." Other barriers, upended beside fenced villages, awaited the evening curfew.

In two days of driving we were scarcely out of sight of rubber. Latex drips into thousands of cups on roadside trees. Householders, keeping a few rubber trees as a truck farmer might a cow, hang white latex sheets on bamboo poles like wash to dry.

But near the coast rubber gives way to swamps, coconut plantations, and rice fields where farmwomen clad in bright sarongs thresh grain with bare feet (page 218).

Old Malacca combines a long past with an unhurried present and a forward look. At town limits signs warned motorists "No Hooting in Malacca Town." Bills pasted on walls and fences reminded citizens of a duty: "No Register, No Vote."

Malacca: Six Flags in Five Centuries

Six flags, native and foreign, have waved over this first European foothold in Southeast Asia. Portuguese captured it from a Malay sultan in 1511; after 130 years the Dutch wrested the colony from them. In the 1820's expanding Britain hoisted its flag over the town, where it waved until Japan invaded the peninsula during World War II. Now the striped banner of the new Federation of Malaya flutters from public buildings.

More than a century ago Singapore and Penang, boasting superb deep-water harbors, left Malacca far behind commercially. Today, with a population of 50-odd thousand, it is the peaceful capital and market center of the Federation's third smallest member.

Little remains of Malacca's Portuguese days—a remnant of the old city wall, a few family names, house steps covered with bright tiles, and the dramatic hilltop ruins of St. Paul's Church where lay the body of St. Francis Xavier in 1553. Working out of Malacca, "the Apostle of the Indies" carried Christianity to the East Indies and Japan. He died near Canton in December, 1552.

Oxcarts with thatched, sway-backed canopies still rumble through Malacca's town square (page 208). Bordering it, sturdy red buildings and clock tower recall the rule of Dutch burghers.

Rubber planters and their families, enjoying

327

Ingers in a Singapore Smelter: The Alchemy of World Trade Will Turn This Tin to Gold

Malaya is the world's leading tin producer. Only rubber brings more dollars from overseas markets in Singapore and Penang relate Malayan ore, plus sizeable amounts from Thailand and Sumatra. The United States takes the lion's share. Industry uses the metal chiefly for solder, brass, bronze, and as a base metal in the manufacture of steel cans and kitchenware. Trussile at left is often heated by hot metal.

I was not I respite from the Englishman, filled the room with a host of other things with various, I thought, and I found the. Yes, by the way, Malaya, and the speech by that has taken place in the and he will. I am not a member of the street in with an unwelcome. I am not a member of the street in with an unwelcome.

In the ancestral home of Heeren Street I am not a member of the street in with an unwelcome. I am not a member of the street in with an unwelcome. I am not a member of the street in with an unwelcome.

In the ancestral home of Heeren Street I am not a member of the street in with an unwelcome. I am not a member of the street in with an unwelcome. I am not a member of the street in with an unwelcome.

And," he added, "we are in the same about Malaya. All our people—Malay, Chinese, Indian, European—must cooperate to form one country, one people, and one government within the Commonwealth, or we will perish as a nation."

Next, we crossed Johore Strait on the last causeway that links Singapore Island to the Malay mainland. Eleven years ago weary British troops, pressed by Japanese invaders, retreated over this narrow way and Javanese

troops to Malaya. Two weeks the Japanese crossed the strait and the community. Singapore with its, and I found the.

As we drive again through the city, I find the same old streets, the same old buildings, the same old people. I find the same old streets, the same old buildings, the same old people.

Singapore a London in Asia

London's traffic, taking main streets and whirling around "roundabouts," keeps to the left. Commanders from the shoulder-to-shoulder. It suggests that one drive, and I found the.

Streets here, like Manchester, Liverpool, and St. Andrews, are lined with houses in the cupola of Victoria. The great Hall announce the time (page 20). A taxi driver, a perhaps Indian, with a British accent.

Behind its British facade, Singapore is a city with Oriental character. Four million of its people are of Chinese, Malay, and Indian descent. In this new city, many of the old are still to be seen. The city is a mix of old and new.

228

Christians Fly as Chinese Workers Finish Lunch at a Singapore Rubber Warehouse

Some 300 Chinese workers in a Singapore rubber warehouse are seen here finishing their lunch. The workers are seen here finishing their lunch. The workers are seen here finishing their lunch.

colony for the India Company, of which it administered Singapore Island from the Sultan of Johore. Its strategic harbor and strategic location soon boomed his settlement into a world port.

Today Singapore still lives by its vast, far-flung mercantile trade. In 1951 some 6,000 ships, flying the flags of 20 nations, moved a whopping 9,000,000 long tons of cargo in and out of its harbor.

Singapore is the warehouse of Southeast Asia. A Government trade expert told me, "We import, export, collect, distribute, and hold in stock everything that goes into this bustling port ports the wealth of the region—the rubber, spices, palm oil, pineapples, coconuts, rattan, timber—to be sent to world markets. It is a huge trade center for American and manufactured goods."

"And Singapore's prosperity depends on the market," he added. "The lion share of the Far East trade, about three-quarters of its imports and two-thirds of its exports, passes through this port."

In two busy weeks we toured swarming docks and bare rubber godowns, saw fire engines and trucks, inspected blimps

and newly built workers' flats (page 104), and visited new streamlined factories.

During local color we witnessed the teen-aging water polo match of 1951 (page 104). In "Horse Master" and a narrow Change Alley we saw a tall avertise a "grand chess" game, we watched a "grand chess" game.

Malaya Clinches Badminton Title

Evenings we strolled through Happy World, Great World, and New World, the city's sprawling cat-paw amusement parks. In the jam-packed auditorium we watched teams representing Malaya and the United States battle for the Thomas Cup, symbol of world supremacy in badminton. The local team, I thought, should win, because their American visitors, seven matches to two.

Checking out of our hotel, I overheard a conversation between two planters who claimed to meet after a lapse of many months. As they parted one asked the other, "What are you doing in Singapore?"

"I am holding a party," he replied. "Seeing the city lights. And now I am back to the Emergency. Cheers!"

A Quiet French Town Lives Tranquilly in the Shadow of the Church.
Where Medieval Christians Once Watched for Miracles

By MELVIN HALL

THE little French town of Vézelay, clinging to the brow of an isolated granite escarpment, looks down with quiet serenity upon a favored land, the beautiful, rolling countryside of the former Duchy of Burgundy.

At the town's highest point stands an immense 12th-century edifice, the historic basilique de la Sainte Marie Madeleine (St. Mary Magdalene), once one of the most important shrines in the Christian world. Tiled roofs gleaming, the houses and shops of medieval Vézelay huddle beneath the church.

Far below, the River Cure winds like a silver ribbon through a narrow, verdant valley dotted with grazing cattle. Gentle hills, their crests darkly wooded, undulate to the horizon in all directions. Slopes and dales are cloaked with a patchwork of aged vineyards, orchards, and fields hedged with blackthorn and hawthorn (pages 230-31).

I have traveled over much of the earth, but few places I have visited can equal the charm of Vézelay. Although I am an American, I have owned a home there for 20 years, returning time and again to area be sleep of the peace which envelops the Burgundian hills.

Crumbling Walls Encircle the Town

France may boast more celebrated hilltop villages, such as Carcassonne,* but Vézelay is fully as rich in romance and antiquity. It lies on the western side of the former duchy, 140 road miles southeast of Paris (map, page 234). Medieval ramparts still girdle the town, though there are gaps where the walls have crumbled or have been used in past generations to build houses.

Today these walls are inviolate. Indeed, the entire village is classified by the French Government as a Monument Historique, and no demolition or new construction may be undertaken without approval of the Beaux Arts in Paris.

My own home was originally an outer bastion of the fortifications, which were rebuilt in the 14th century as a defense against English invaders. The venerable *gentilhomme's*, or country house, stands in a corner of a walled garden (page 236).

I often call the attention of visitors to the garden gate, a "recent" structural modification. Carved on its keystone is the re-

building date, 1776—quite appropriate for an American owner.

My thick-walled, vine-covered stone house is called La Girgentie, the name of a long-vanished hamlet which once adjoined the old garden.

I like to think of Vézelay as symbolic of the timeless and enduring in a fretful, fevered world. Only the unending round of the seasons in the tranquil countryside speaks of change.

Colors Beautify the Pastoral Scene

With the coming of spring, white blooms powder hedgerows and fruit trees. Wheat and rye push up tender green shoots. Tall poppies, cultivated for a salad oil obtained from the seeds, lift pale purple blossoms. In summer these shades yield to a deep green broken by flaxen patches of ripening grain. Autumn tints the hedgerows and vineyards with scarlet and russet, and trees flaunt their gaudy leaves before the long winter sleep.

In the beauty and peace of this rural scene there is nothing to suggest Vézelay's bustling, glorious past.

For decades the town's Benedictine abbey existed as a virtually independent theocratic island in a tumultuous sea of feudalism. Its power was such that it recognized neither duke nor seigneur as its master. It answered only the authority of the Holy See in Rome.

In the 12th century as many as 8,000 monks lived within the walled compound. The abbey's sometimes despotic rule frequently brought it into conflict with the neighboring barons residing in Vézelay. It maintained its closure and in the adjoining villages. Jealous lords also challenged its authority with varying degrees of success.

Yet, despite the troubled times, the abbey was one of the most important pilgrimage objectives in the Christian world, ranking close behind Jerusalem, Rome, and Santiago de Compostela in Spain, burial place of St. James the Greater. At that time the abbey's power and prestige stemmed from a general belief that the remains of Mary Magdalene were enshrined at Vézelay.

Just how these relics were obtained from St. Maxima in Provence, a reputed burial place of the saint, is not clear. A young monk

Visitors Stride the Old Pilgrim Route Beneath Vézelay's New Gate, Six Centuries Old

When a pilgrim comes to the town of Vézelay, they find on this road and there a few old people, some of whom are the last of a race that has nearly disappeared. Many of them look like old men.

was said to have transferred the remains about the middle of the 11th century. At that time the abbey had been in existence more than a century and a half.

Reports of the acquisition brought streams of pilgrims to the little hilltop abbey. With the acquiring of wealth from devout penitents Benedictines built on the site of their old abbey the huge, Romanesque basilica which now crowns the hill (page 207).

A Pilgrim Writes of Miracles

The basilica was dedicated in 1104 by Pope Paschal II, who rode on muleback more than 800 miles from Rome to officiate at the ceremony. Soon the nave, though quite large, was inadequate to receive the mass of pilgrims, and the narthex, known as the Church of the Pilgrims, was added in front.

Sancti de Compostela preserves in its library a Latin manuscript written by one of these 12th-century pilgrims, who described the Vézelayan scene with these words:

"In this place a great and very beautiful basilica and an atchey of monks were established, the wrongs of sinners are forgiven, God for love of the gospel, the blind are restored to sight, the tongues of mute are loosed, the halt stand erect, those who are delivered, and inestimable benefits are accorded to many of the faithful."

From 1100 to 1150 the pilgrim traffic by the valley of the Vézère was very rapid. At that time the principal road of approach led through the hamlet of La Grange, booths flanked the thoroughfare hawking food, wines, clothing, and objects of silver to be offered at the saint's shrine.

Eventually, for various reasons, belief in the authenticity of the saintly relics was shaken. The influx of pilgrims dwindled. Vézelay shrank to a half-forgotten village. Today, at least in winter, there are only a few people living within the crumbling walls and perhaps another 150 in the outlying hamlets.

Not until the latter part of the 19th century were other relics of the Magdalene presented to the basilica. Only three benedictine monks now serve the parish, but pilgrims still come in large numbers for the saint's fête day on July 22, when the relics are carried in procession through the town.

During midwinter the residents of this Burgundian hillside practically hibernate, but with spring comes an awakening.

Each family tills a vegetable garden, often at some distance from home; most families also raise rabbits for the table (page 243). The skins are sold to make children's coats, gloves, and fur-lined slippers.

Often an itinerant purchaser of rabbitskins, making his rounds on a bicycle or motorcycle hang with slightly gory skins, can be heard crying melodiously, "P-o-o-o-o-o d'Lapin!" (*peaux de lapin*, rabbitskins). He pays 12 to 15 cents for a good skin, and a little more in winter, when the fur is heavier.

Searching the Woods for Flowers

It is a pleasant May Day tradition in France to have and to give *mugnets*—lilies of the valley—a flower supposed to bring good luck. So, just before May Day, everyone not crippled by age or infirmity goes into the woods to gather the tiny flowers, hidden beneath carpets of moss and dead leaves.

I join the hunt in my jeep, usually accompanied by a coterie of children. Their young eyes squint as they spy the white blossoms and pluck them with cheerful cries of "For gold, un . . . deux . . . trois . . .!"

Earlier in the spring the little toads begin to pipe at dusk from walls now brilliant with golden yellow wallflowers. Each band utters a single peep at regular intervals, always in the same key, like water dripping slowly into a well.

In contrast to this quaint chorax, night-ingales trill happily farther down the hillside,

and by no means only at night. The males sing while the rather birds are on the eggs. They are heard less often after the eggs are hatched, but the males keep piping on.

In May and June there comes the hunt for the edible snail. Again young and old take to the fields, stalking with solemn intensity amidst vines and along walls. They carry sticks to poke about in the leaves, and bugs or pails in which to deposit their catch.

Black-and-white magpies watch curiously from the treetops, balancing themselves against the wind with long, up-tilting tails; or vulphur-striped larks fly like *Swiss* clocks, and friendly little larks scurry up and along the walls.

The snail is a gastronomic delicacy far more widely esteemed in France than frog legs. As in many other culinary preparations, it is primarily the sauce that matters, and for this Burgundians are rightly famed. But you must relish garlic, else snails are not your dish.

Père Olari, my ancient gardener, collects snails, puts them in a bucket with a wooden top, and there "purges" them for 10 days by starvation. When they emerge from this trying period, they are ready for the casserole, but it takes Louise Goutier, my 70-year-old cook, to make the sauce.

Summer Brings a Host of Pilgrims

On Lollidays and in summer many visitors—including artists, come to Vézelay. The inn shopkeepers, the vendors of post cards, the inn and cafe keepers devote long hours to their saleswork, for these are the "seasons" which must carry them through the year.

During most months there is scant rest for the farmers—a majority of whom live in adjoining villages and hamlets. They manure their fields with load after load of cow dung, hauled in large carts pulled by oxen (page 243), or by two, and often three, stout horses in tandem. Burgundian farmers plow most fields three times a year and rotate their crops from potatoes to wheat, beets, oats, clover, or sainfoin, with a fallow period every three years.

Recently a few small tractors have appeared, but the area does not lend itself to such cultivation because fields usually are small. Under the French system of dividing an inheritance among all heirs, farms have been broken up into small parcels scattered all over the landscape.

Most farmers cultivate with yokes of heavy white Charolais oxen (pages 235, 240, and 241); others with blond-maned, reddish, or roan Ardennais horses. The men talk continually to their beasts in an even balance of

Dreamy Vezelay Soars Above Its Hill Like Some Airy City Imagined by an Artist

The town of Vezelay, France, is a beautiful sight to see. It is a small town, but it is very beautiful. It is built on a hill, and it is very old. The town is very beautiful, and it is a very nice place to visit. The town is very beautiful, and it is a very nice place to visit. The town is very beautiful, and it is a very nice place to visit.

House. At the Lake's White House, and by Down Main Street with the attached White House. At the Lake's White House, and by Down Main Street with the attached White House.

encouragement and insult. If they did not, they say, the animals would not know how to work.

All day, from early dawn to late evening, voices drift clearly over the valley. I hear them from my bedroom window, or from the terrace, calling:

"Oh my pretty, let's go. Come now, what's holding you? You've been well fed? . . . That's it, here we go . . . Not so fast! . . . *Of-ee!* . . . Who sired you, you kind of toad? . . . There we go, my pretty . . . *Of-ee!* . . ."

Birds, Too, Reap a Harvest

Scores of swallows follow close behind the mowing machines, flying low in graceful curves to catch insects stirred up by the machines. On hot days cicadas drum amidst the cranking of rickets. The noisy cicadas seem to call to the reapers in Provencal dialect: "*Ségo, ségo, ségo—reap, reap, reap!*"

At harvest time an ancient *battisse*, a highly temperamental threshing machine that breaks down regularly and has to be welded on the spot, is hauled up the town's steep main street (opposite page). There it threshes the grain of Monsieur Soliveau, filling part of the town with thirst-provoking chaff.

While the thresher is being welded during a breakdown, workers slip into a near-by cule to slake their formidable thirsts with wine. This happens often enough for the time to pass quite jovially for all but the operator-mender of the *battisse*.

With autumn come other diversions. People collect walnuts from the numbered trees they rent from the commune. Ardent hunters go out with their dogs in pursuit of rabbit, partridge, and woodcock. Later in the season they hunt deer and wild boar, which used to be plentiful before World War II but now are few.

Autumn's major activity is the *vendange*, gathering the grapes and making wine. This is a jolly season. In villages and along the roads stand barrels red stained by the grapes of previous years. Two-wheeled carts load barrels and grapepickers and ramble to the vineyards.

Gossip Enlivens a Harvest Party

On slopes facing the southern sun, groups of men and women move slowly between the vine rows, cutting bunches of grapes. Each group deposits its grapes in a basket borne on the back of a youth. When full, baskets are dumped into barrels (page 238). At evening the loaded carts creak home, the pickers tired but merry and full of quips.

I often go out with Monsieur Defert and his party during the *vendange*. They drive in

a cart pulled by a stout mare and a humorous but patient donkey. The men gossip with Rabelaisian indulgence to one another, to the mare, and to the donkey.

Once arrived at the vineyard, the party works up wards between the rows, one person to each row. Monsieur Defert, being more interested than the others in the state of his vines, may fall a little behind. Then some of the workers are sure to call out in genial banter:

"Isn't the *patron* supposed to set the pace we all should follow? But look at him—he's behind all the rest! Should we slow down?"

Monsieur Defert grins and continues on his course, critically and lovingly regarding his vines while shearing off the bunches of grapes with his short curved knife.

There are various ways of treating the grapes, but usually the red grapes are passed through a mangle, then into a big vat where fermentation starts, after which the mash is pressed and the young wine put in hogshens to mature. White grapes usually go directly to the press.

The larger vinticulturists have their own presses. For the smaller growers there are portable presses set up in the villages. Passers-by are invited to sample the new wine as it trickles from the press (page 239).

Insect Ruined Many Vineyards

Vézelay lies between the districts of the famous vineyards of Burgundy. The wines of my vicinity have no noted names, yet some of the slopes produce a very drinkable "little" wine.

Later the marc, or mash, that remains after the grapes are pressed, is distilled into *eau de vie de marc*, here called *marc de Bourgogne*. There is scant argument over the potency of this beverage. Let the hearty drinker beware of it in volume.

There used to be many more vineyards in this area, but the plant lice *phylloxera*, which arrived in the 1870's, ruined them. Wars and the enticements of cities have dispersed many of the hands that in days past tended the vines.

Armistice Day is celebrated in Vézelay with a simple but moving ceremony. As a retired United States Air Force officer, I am invited each year by the townspeople to don my uniform and take part in the program.

On the first such occasion after World War II, I received an invitation from the mayor requesting me to attend in my "capacity as representative of the Allied and Associated Nations." In this capacity (quite unofficial, since the title was conferred upon me by the mayor) I placed a wreath on the Monument

Veiled Against Stings, a Beekeeper Harvests Honey

THE ABOVE-illustrated scene in Vézelay's flower-patch country. The man, a local expert, is carefully using a special tool to extract honey from the hives. The bees are not disturbed, and the honey is collected in a large bowl.

the time and in a great deal of trouble to contribute something of relief to the economy of the occasion.

When the day of festival had come to get my wagon from Vézelay, this time, my car was there, as usual. For then years ago, when I began to drive.

A Surprise Floral Necklace

As there is no florist in Vézelay, I had to see what I thought would be a modest and simple floral necklace for my car. So, but the man knew where to go. When I went to see him, he was very kind and gave me a beautiful necklace of flowers, made of roses and carnations. I was delighted. I could have bought a like one for three times that sum in New York or San Francisco.

I returned from Vézelay with two horses and a carriage. The horses were very good. With these two on the road, we decided to make an excursion to the north. The road was very good. The horses were very good. The carriage was very good. The road was very good. The horses were very good. The carriage was very good.

Thus we returned to Vézelay, where the deep road from the north was astonished gaze at the people. When the day of festival arrived, it was a great day.

I told you that which would be the first day of the festival. But I don't think you were having a good time.

The festival in Vézelay is one of the great festivals of the north. It is a very old festival, and it is very famous. It is a festival of the north, and it is a festival of the north. It is a festival of the north, and it is a festival of the north. It is a festival of the north, and it is a festival of the north.

On the first day of the festival, the people of Vézelay are very happy. They are very happy, and they are very happy. They are very happy, and they are very happy. They are very happy, and they are very happy. They are very happy, and they are very happy.

There are many people of the north, and they are very happy. They are very happy, and they are very happy. They are very happy, and they are very happy. They are very happy, and they are very happy. They are very happy, and they are very happy.

Today the people of the north are very happy. They are very happy, and they are very happy. They are very happy, and they are very happy. They are very happy, and they are very happy. They are very happy, and they are very happy.

On the first day of the festival, the people of Vézelay are very happy. They are very happy, and they are very happy. They are very happy, and they are very happy. They are very happy, and they are very happy. They are very happy, and they are very happy.

Pigs Voice a Loud Protest

Though cattle seldom come to the fair, stout Ardennes but comes with their sturdy teams, and many little pigs attend. The people are very happy. They are very happy, and they are very happy. They are very happy, and they are very happy. They are very happy, and they are very happy. They are very happy, and they are very happy.

A Vézelayan Advises One of His Plump Rabbits Destined for the Table

Most animals in a village are raised for food. The rabbit, once a prominent feature, is now a rarity. With more and more the rabbit is being replaced by the piglet, which is a more common sight in the village. The rabbit is a very plump animal, and it is a good source of food.

Small porcine squeals rend the air as the pigs are lifted by the tail and carried from the jalousies and carts into crates. Then come the bargaining by ruddy-faced men, and some of the piglets change hands and carts, shrill and lustily.

Vaulted Cellars Carved from Granite

Many buildings in Vézelay date from the 12th century; a few have still earlier foundations. In the vicinity of the basilica one observes numerous Romanesque door and window arches, solidly blocked up, a few of which show Moslem influence in decoration. Unhappily many of the ancient façades have been mutilated by later modifications.

The spacious cellars of these old houses are a special feature of Vézelayan architecture. They were the great storehouses for the late look and good planning, supported by Romanesque columns.

Such cellars served a single purpose in medieval times. Formerly they were storehouses for food supplies and wine to carry through periods of need. But they also served as a trap for precious rain water from the roof. They provided living quarters for

many refugees. All the great cellars were interconnected underground.

One of the best-known buildings in Vézelay is the Maison des Colombes, a very old house built over in the 15th century. It has a fine cellar, and its round-arched windows and door in the ground floor bear inscriptions in Old French and in Latin.

The house is named for a family that owned it in the 15th century. Colombes, or Colombes, is a family name which has been related to Christopher Columbus, since their armorial bearings were similar.

Farther up the street is the house where Louis VII of France resided during Easter tide in 1146. He is the king often credited by historians with first giving France its royal emblem, the fleur-de-lis. Louis, according to legend, chose for his armorial bearings the sword-shaped flowers of the late spring times that grew in masses of yellow and pale lavender by the edges of Burgundian forests.

These flowers thereafter took the name of "fleur-de-lis," an emblem of time shown in the fleur-de-lis. Though we sometimes read of the fleur-de-lis in France, they are really wild roses.

246

Children Celebrating a Religious Festival Lead a Procession past Walled Gardens

One of these young men was the first of the group in the procession and Mr. M. J. Jones, N. C. (now in the U. S. Army) was the last of the group in the procession.

In sheer size alone the Basilique de la Sainte Marie Madeleine is impressive. Four hundred feet long, it has two widely spaced towers which rise above the height of the nave. One forms a part of the facade; the other surmounts the southern transept (page 237).

Externally the lines are plain, almost severe. They are relieved by protruding grotesque heads and a somewhat heavy Gothic window over the outer portals. The window, as well as the upper part of the front tower and the flying buttresses of the nave, were built late in the 12th century, when Gothic style was beginning to replace Romanesque.

It is the interior that makes the basilica one of the glories of religious architecture. Beautifully proportioned, well lighted, and unadorned by statuary, the church has a warmth that few others of its size possess.

The projecting flat round arches supporting the vaulting of the nave, of alternate blocks of brown and white stone, give an astonishing effect. They trace in spirit from such Moslem buildings as the Great Mosque of Córdoba, which one of the Benedictine monastic architects might have visited.

Kings and Commoners Met at the Shrine

Among the finest features of the nave are the historiated Romanesque capitals of the columns and piers. Here one finds the storybook of the Middle Ages. Sculptures in stone on portals, friezes, and capitals portray the history of Old and New Testaments, popular legend, and the recompense of the good and punishment of the wicked.

Below the Gothic choir is the crypt, parts of which date back to the first church. It contains the *châsse*, or reliquary, in which are preserved relics of St. Mary Magdalene.

To this vaulted crypt came many medieval celebrities: St. Bernard; Louis VII and his wife, Eleanor of Aquitaine; Richard the Lionheart of England and Philip Augustus of France, making rendezvous at the start of the Third Crusade; St. Thomas Becket, fleeing the wrath of Henry II; St. Louis of France, and countless others.

Lowly pilgrims by the tens of thousands wept and prayed over relics of the Magdalene for forgiveness of sins. Many of these penitents had taken a vow to make the still greater pilgrimage to Santiago de Compostela, there to pray over the remains of St. James the Greater.

Stretching behind the apse of the basilica, a broad terrace, partly covered by aged chestnut trees, affords a magnificent view. Visitors look down upon the valley of the Clère, 500 feet below, and the ancient village of Saint Père sous Vézelay (page 230). Beyond, the countryside rolls pleasantly to the heights of

the Murvan, a land of dales and forests whose clearings are mauve-tinted by heather.

Where Saint Père is now, the gallant and pious Count Gérard de Roussalon founded a convent about 860. It was destroyed shortly thereafter by Norman invaders. Undeterred, the Count soon established a Benedictine monastery on the safer site called Vizeliacus, now Vézelay.

Originally there were seven gates to the town, but only one remains intact. This is the Porte Neuve, or New Gate, begun in the 14th century and one of the most splendid examples of its period in France (page 253). It faces the Chemin de Ronde and the old road to Asquins. The former, as its name implies, skirts the walls around the mango-shaped town, where once stood the ancient moat.

There are remnants of three other gates, from one of which a path descends to the Chapelle Sainte Croix, now known as the Cordelle.

A tall wooden cross near the chapel marks the site where St. Bernard preached the Second Crusade, Easter, 1146. His word-fired a zealous throng of about 100,000 barons, knights, and squires, led by King Louis VII.

Chapelle Sainte Croix was built between 1146 and 1150 to commemorate the event.

In 1946 a Peace Pilgrimage assembled at the commemorative cross on the 800th anniversary of St. Bernard's sermon. Groups of pious pilgrims, bearing 80-pound oak crosses, came afoot in penitence and humility from many parts of France, England, Belgium, Luxembourg, Austria, and Switzerland, to pray for international peace.

Some of the pilgrims, including the whole Belgian delegation, had marched on bare feet from their homelands. All were barefoot when they climbed to the basilica, where thousands gathered on the fête day of the Magdalene.

The Cross on the Clouds

The pilgrims had spent the previous night on near-by ridgetops, camping around bonfires. The basilica was floodlighted, standing immense in silvered outline on the height of the escarpment, a glowing symbol for the pilgrims keeping vigil with the crosses.

A thin layer of clouds had formed over the valley at about 3,000 feet. Against these clouds the floodlights, playing on the basilica, cast the shadow of a gigantic and perfectly formed cross, dark upon the white background. Pilgrims, huddled by their bonfires, watched in awe until the clouds dispersed and the shadowy cross was gone.

It was a poignant reminder, to those 20th-century penitents, of the glory of Vézelayan history.

A Salinese Desert Patrol Sweeps Past Klurtoam's Memorial to General "Chinese" Gordon
 This memorial to General Gordon is located in the desert near the Saline Desert Patrol Station. The memorial is a large, rectangular structure, and the patrol station is a small, white building with a red roof. The desert landscape is arid and hazy.

Spear-throwing, 6-foot Warriors in Africa's Remote Heartland Have Been Little Changed by Civilization's Slow Advance

By HARRY HENSTRAAL

THE engines of the little ferry coughed into life, ready to chug us across the smooth green Nile at Juba, far south in Africa's equatorial Sudan.

On deck I was acquainting my young bride with local folk, old friends of mine but new to her. A brown-skinned girl, wearing only a few beads, hoisted an infant on her hip. A stooped, wrinkled trone drew from her goat-skin skirt a foot-long pipe and lighted it with burning charcoal held in bare fingers. Beside her a tall black warrior, dressed only in unicorn, leaned indolently on his spear.

Suddenly the engines gave an agonized scream and clanged a bell. The engines stopped. There was a loud splash.

Watery Introduction to the Nile

We rushed to the off-shore side of the ferry, to see a sickening gurggle of bubbles. Deep in the water we could trace the shadowy outline of the truck carrying our baggage! While we had been chatting, our driver had driven the truck aboard, left the brake insecure, and the vehicle had rolled over the side.

Nile natives in narrow dugout canoes soon arrived to race after odd pieces of luggage that bobbed downstream. Hours later, 200 chanting, sweat-gleaming men were tugging on a long line attached to the car.

As we spread soggy clothing over the sun-baked ground, my wife's first quiet sobbing became forced laughter. A bride only a few days away from Chicago on her first trip to Africa, she could little visualize herself wearing yellow cashmere sweaters, white blouses, and tan jodhpurs stained as ugly green from a small artificial Christmas tree she had packed.

I had no drying problems. My baggage had been sucked away by undercurrents, never to reappear. I joked about how much less handsome I would look than the sturdy natives dressed in nothing at all, but I secretly worried about my lost expense money.

We had come to live in south Sudan. Attached to the United States Naval Medical Research Unit located at Cairo, I was to study disease-causing parasites.*

Today's shifting news spotlight has turned on the Sudan, where for the last 54 years Egypt and Great Britain have ruled in a condominium, or joint governorship. But this attention has left even well-informed persons wondering just what and where the Sudan is (map, page 250).

The 967,500 square miles of eastern, central, and northern Africa that comprise the Sudan still remain virtually unknown, off Western civilization's beaten track.

A few American missionaries have worked there. Air travelers, stopping overnight at Khartoum, have spent the evening buying carved ivory animals on the Grand Hotel veranda. Other Americans did wartime service at isolated desert airports on the route across Africa. But most Americans know the Sudan only as a stamp-album country that for 50 years furnished a design portraying a postman astride his camel on a blazing desert.

Egyptians know the Sudan as their southern neighbor, having strong bonds of language, commerce, and religion with this vast area surrounding the life-giving Nile. Formerly parts of it were Egyptian by conquest.

To many Britons, the Sudan is an endless, inhospitable desert where, only three generations ago, the fabulously rich Gen. Charles George ("Chinese") Gordon was killed in the revolt of the Mahdi, and where Lord Kitchener was victorious in battles against fanatic desert dwellers.

The Briton who works in the Sudan looks upon the country with missionary fervor and feels it his personal obligation to guide it gently on the road to good government.

Two Sudans—Desert and Veld

During the past few years it has been my fortunate duty to make several trips to the Sudan prior to the one when my bride received her moist introduction to Juba.

My first visit was in 1948. Traveling the full length of the country as I did, I learned that there really are two Sudans—the vast desert region of the north and the veld and El Sud of the south. These two parts differ in plants and animals and form two distinct ethnographic and economic areas.

On that trip, our Naval Medical Science Group, consisting of a clinician, parasitologist, zoologist, laboratory technician, photographer, and several assistants, set out from Port Said, Egypt. We drove our jeeps and heavy-duty trucks south through teeming, fertile fields of cotton and sugar bordering the Nile. Beyond Aswan, where roads end, we followed vaguer

canal tracks across the barren Western Desert.

Days later, rubbish, footprints, and goats shattered the desert's serenity. We had reached bustling, sun-baked Wadi Halfa on the Sudan's northern border.

At the railroad siding, piles of hides, sacked beans and grain, and pens full of cattle awaited export by river steamer to Egypt. Across the tracks, piles of Egyptian manufactured goods lay ready for loading on toylike "goons cars," southward bound.

That day, when blinding hordes of feeble-winged mudjids emerged from Nile mud, we made our first medical observations. These *nuwiti* cause such a severe asthma-like condition among the people that the town of Wadi Halfa may eventually be moved away from the river.

South of Wadi Halfa the Nile loops far to the westward. We cut across the Nubian Desert and came again to the river at Am. Hamed. Following along its bank, we passed

* Sudan Is the Key to Egypt's Ambition for a United Nile

Sudan's million square miles stretch from deserts in the north to wooded country in central Africa.

To Egypt the country means control of the upper Nile and its life-giving waters. Since 1899 Egypt and Great Britain have ruled the area jointly, but Cairo's demands for complete union with the Sudan have produced friction. Last year the two nations began arranging for the first step toward an all-Sudanese government. After several years the people are expected to choose their permanent status.

A satisfactory settlement would go far to improve Anglo-Egyptian relations, strained by differences over Suez and the Sudan.

Lotuka, 10 Years Old

But in His Camouflage Hides from Sun Like a Turtle in Its Shell.

The young boy, Lotuka, is a member of the grasslands of southern Sudan. The people of this region, during the last few centuries, have lived by their skill as hunters and gatherers. This young Lotuka was under his cover and the white matter enjoys a pipe. Lotuka has sold his soul.

the same steadfastness with which he faced death at the hands of the Mahdi's forces. Now at the Palace, the residence of the Governor General, Gordon's victorious successor, Lord Kitchener—proud, upright, never knowing defeat—sits on an Arab horse.

Khartoum, 1952 Eclipse Site

Around the Nile, North of Khartoum, a scant 20 miles from the automobile road Khartoum's center is a bustling Omdurman. There in 1898, Khartoum fought his ruling battle against the Mahdi's forces.

Now 125,300 people dwell in this busy brick city. Commerce, native industry, and tourist curios support them. Ivory carvers fashion pleasing miniatures of Sudan's big game animals; gold- and silversmiths copy ancient Arabic designs. In the crowded marketplace, city dwellers and wide-eyed desert

nomads quietly and earnestly bargain. Nowhere else in the Arab world have we seen marketing so hushed.

Early in 1952 I was fortunate enough to return to Khartoum when Nature put on one of her grandest spectacles—a total eclipse of the sun. Several days before "E Day," February 25, the Government radio had warned the natives against hurting their eyes by staring directly at the sun before the eclipse. The warning was in Arabic and was the result that at the time I was at the Arab market, the women and children in the dark lest they be harmed by the eclipse.

Some three score scientists from 15 foreign nations set up observation stations about the town. The National Geographic Society, with the cooperation of the U. S. Navy and the U. S. Air Force, sent Dr. George Van Biesbroeck of Yerkes Observatory to continue his work on the accuracy of Einstein's theory of relativity. We laughingly referred to Dr. "Van

Biesbroeck" as the professor who would grade the arithmetic paper (page 54).

Einstein had shown that proof of his theory would be the bending of light rays from distant stars as they passed the sun. This "bending" was estimated as a small fraction of a degree—about one-thirtieth of a degree.

Dr. Van Biesbroeck, who was in the Sudan's field during the eclipse, returned to Khartoum six months later. He reported that the same stars which when the sun would not bend their light rays, came from the same place as when the sun was in the field. The results of his observations thus fall within the range of these results.

Two years earlier Dr. Van Biesbroeck had surveyed the locale. In 1952, Khartoum easily recognized the dignified, white-bearded astronomer. Some of them pointed him out as

A Dreaded *Habook* Rolling In from the Desert Envelope Khartoum in Sand

The only serious complaint I heard about our stay in America that I heard of the night. A French tourist in the desert, who had been in the desert for a long time, had been in the desert for a long time.

straight lines in geometric pattern over the land. The 200 ft. May was a star on the canvas. The air was on the edge of a cold or a cold desert on the coast.

Further westward is pointed by a line of the edges of the cars. Many women have a hole punched just below the lower lip. It was a hole with a stick or an empty pipe in it.

Men were in their houses with their women, who would ask for a cup of tea. They were in their houses with their women, who would ask for a cup of tea. They were in their houses with their women, who would ask for a cup of tea.

Leaving Behind Tinted Men's Skins

At a recent landing I was surprised to see that the men had been back to the house. The men had been back to the house. The men had been back to the house. The men had been back to the house. The men had been back to the house.

Everyone wears a gaudy hat with a

with an ingenious sliding bar for passing it over the head. Even the men who wear these elaborate robes of large gleaming cotton from these lands.

Our stock of safety pins and other pins was quickly depleted as gifts to the women. Our hats, our shoes, and our shoes were everywhere. And the shiny shoes were the most beautiful. They were the most beautiful. They were the most beautiful.

Leaving in the hands of the people when they were and respect. They were the most beautiful. They were the most beautiful. They were the most beautiful. They were the most beautiful.

Most of the villages have a fine view of the sea. The sea is the most beautiful. The sea is the most beautiful. The sea is the most beautiful. The sea is the most beautiful.

Byron

Happy Warrior Flashes a Toothpaste-and Smile

A Lotuka warrior, decked for a battle, smiles, displaying a perfect white smile. Lotuka men rub their teeth with the fat of a deer and wash them with water.

Villages consist of closely grouped, circular huts, each within a stockade to protect people and goats from wild animals. High conical grass roofs over thick mud walls keep huts cool and dry.

When we visited one, we crawled on hands and knees into the circular hut. The walls were thick mud, the floor was dirt. The walls were covered with a pattern of small, square holes. The walls were decorated with shields beside them. The walls were covered with a pattern of small, square holes. The walls were decorated with shields beside them. The walls were covered with a pattern of small, square holes. The walls were decorated with shields beside them.

Hole in the Ground Makes a Cookstove

Inside, beside the entrance, on a flat, rounded floor made from soil, a mound of fermented millet was drying before being re-soaked to produce native beer. Nearby, a shelter of branches shaded the fire in a little hole over which all cooking is done.

Although Nature supplies materials for building huts, quality, quantity, season, and labor must be considered. We built a dozen

huts for laborator storage, and quarters for the men. We were surprised at huge costs (even with cheap labor) and the difficulty of obtaining proper materials. Our game of men searched miles of land for the best resistant poles for 6-foot-high tukl walls. Bamboo for roof framework was brought from distant hills.

The rains regulate the annual cycle of events at a Lotuka village. Wet summer months are devoted to agriculture, dry winter months to hunting.

Rain Maker Uses Magic Stones

The rain maker, *ko*, is one of the community's most important persons. In April or May he "makes rain" with special rain stones and announces the beginning of the planting season.

Though his name is secret, I knew he chose to see a rain maker in action.

After much deliberation he allowed me to enter the village where the sacred *naphanga* stones were kept.

explaining that the sight of the stones would make most persons go blind.

I watched as a boy, rain-maker helper, removed a heavy flat stone from the narrow entrance and crawled into the stockade. He brought out seven pots and reverently withdrew 11 smooth, elongated, shiny quartz and black stones dripping with water and grain.

One pot held only a single stone. When I asked why, the rain maker explained that the fourteenth had magically climbed from its resting place and escaped.

After the assistant had sacrificed a blind goat, the rain maker drank some beer and mixed it with contents of the goat's intestines. Then he and his assistant spat into the beer, added soil, and threw this over the rain stones. Rain making ended by mumbling sacred words.

Seasonal rains seldom failed to follow.

Early in the growing season food is scarce. Improvident tribesmen have consumed much of last year's grain as beer or gird. Game plentiful during the dry season, scatters fat

and white and becomes hidden by tall grass.

A quick-ripening durra, or millet, is planted early to shorten this hungry season. On other plots a variety maturing more slowly produces heavier yields.

We never developed a liking for the Lotuka staple, a soupy millet porridge usually flavored with sauces. Their low-alcoholic foamy beer, or *maria*, for which much of the durra crop is used, tasted like a cheap imitation of ours.

Corn, or maize, grows poorly because many nights are warm and rains too irregular for good yields. Peanuts, however, thrive and provide welcome food before grains ripen. Called *ful andul*, the peanut offers possibilities for commercial development.

My wife's first attempt at cooking in Torit was preparing peanut soap. We have had it at least once a week ever since.

The sesame plant, or simsim (*Sesamum orientale*) provides a cooking oil, a food base, and a sticky binding for the red ochre the people smear on their bodies. Castor beans growing about the village yield a substance for treating women's zontskin skirts. Sweet potatoes have been introduced by Italian missionaries. A little tobacco is planted to fill women's pipes; men seldom smoke (page 252).

Cottons growing, forced on the Lotuka before World War II, resulted in only meager yields. Money had little appeal, and cash crops, to them meant only useless work. Now the carefully regulated growing of rainland cotton is slowly being reintroduced.

Termites a Native Delicacy

Rains bring flying hordes of fat, winged termites, much relished by the natives. Lured by flames and caught in pits specially dug to collect them, these insects are eaten raw or roasted. Even some Britishers serve this delicacy, roasted, with sundown drinks.

We were amazed by another method of termite capture. Women would pour water into the passages of termite mounds and beat an imitation raindrop patten on the towers

257

U. P. & S. SERIES 1000 1000 1000 1000

Fashion in Lotuka and Demands Lip Pangs and Scars

Since 1900, produced by rubbing ocher into wounds, or by burning, or by cutting, or by recorded the number of scarification marks. (Page 252)

Thousands of debilitated insects would issue forth and be gathered in baskets (page 268).

Most Lotuka have large herds of goats and a few sheep. When hunger or ceremony demands, a few animals may be eaten. But flocks are preferably left to breed, for they provide families with their chief wealth.

Since early times many Nilotic tribes have been cattlemen, counting wealth in terms of great-horned Zebu cattle (pages 262, 263). Other tribes live in grasslands dotted by scrub trees, where tsetse flies, carrying trypanosomiasis, restrict cattle raising.

The diet of some neighboring cattle-owning tribes consists largely of milk and blood. A gourd of blood is obtained by cleanly piercing an animal's jugular vein each fortnight. The puncture is stopped with clay, and animals go off none the worse for the bloodletting. The Lotuka, however, consider this practice disgusting and restrict it to only during famines.

Weaver birds are a great economic problem in the Sudan. Often we saw millions of them blackening the sky as they wheeled in close

locks. They feed on the durra seeds and can completely ruin acres of crops.

To control these voracious pests, farmers, armed with piles of soft mud, sit on tall platforms overlooking their fields. Whenever a flock approaches, the watcher lets fly a mud ball from the end of a twanging stick.

Natives Busiest in Dry Season

In November, as rains diminish, the tempo of village activity increases. Grain is harvested; grass and building materials are sought over a wide area. Straw-colored roads replace rusty, silvery-black ones. Young men hasten to prepare regalia for the months when drums will beat. New spears are made and sharpened for hunts.

This is the season, too, when great smoke palls rim the horizon. Natives burn the tall grass from the plains, so that the land is left clear for new grass shoots to grow. Long worried by destruction caused by these grass fires, the Government has decreed that firing be done only on small areas, early in the season before vegetation has become dry.

In December or January, the rain maker again studies the stars to determine the propitious day for the first hunting dance.

Before the new year dance, men stage a ceremonial foray called *netabija*, or "open time for bloodshed." The first trophy presented to the rain maker indicates the season's fortunes. A female animal foretells good luck. If it is a male, the rain maker must appease the supernatural to ensure future success.

I accompanied the men on one of these forays. Hunters had smeared themselves with ashes, and each carried several long spears. As they neared their assembly place a mile away, they raced forward brandishing spears and shouting their own nicknames. Still running, they passed a small fire and dipped spearheads into it to impart bravery.

Next they sat down to sharpen spear points on smooth rocks or tightened loose spearheads by holding them over the fire to melt gummy resins binding the heads to the shafts.

Game Bag—a Tortoise, Two Ticks

At last, enthusiasm at fever pitch, the men stalked single file into the brush, their spears held high, to form a huge human circle around their hoped-for quarry.

On that first hunt of the season almost all game escaped because of unusually late rains and high grass. Only a hard-shell tortoise was caught, but its eggs betokened better luck to follow. A more immediate bonanza to the finder was my reward of three silver coins for a pair of huge, rare, coppery ticks from the reptile's neck. Having no pockets, the man cached the coins in his rat.

Often there is real excitement in these hunts, for many kinds of African game may be cornered within these human traps—leaping gazelles; stealthy, snarling lions and leopards seeking cover; jackals, hares, and wart hogs running aimlessly; galloping, stiff-legged giraffes; or savage buffaloes and rhinoceroses.

In the face of danger, group discipline is surprisingly well maintained. Magnificently brave techniques lessen danger when evil-tempered buffaloes charge. A cornered Lotuka will fall prone before his maddened, rushing enemy, knowing that the buffalo cannot swing his massive horns near the ground.

A prostrate hunter who thrusts his spear upward into the advancing beast's neck becomes a village hero.

Feasts of Elephant Meat

Whenever we saw long lines of sweating men, women, and children burdened with gasoline tins, sacks, pots, or baskets and racing madly down a trail, we knew an elephant had been killed. Usually by the time we reached the kill hundreds of screaming, arguing, blood-soaked people were already tearing at every bit of flesh and bone.

A few white men with cast-iron digestive systems eat elephant meat. Epicures say only the trunk is palatable. When fats were scarce after the war, however, friends provided us with excellent clear bird made from elephants' feet.

The Game Department estimates that about 17,000 elephants roam the Sudan. Of about 9,000 in Equatoria Province, 2,500 inhabit Torit district. Nearly 1,500 elephants are killed annually, but the rate of increase is believed to be about seven percent. Cow elephants outnumber bulls four to one. By law, females may be killed only when they are destructive.

Elephants with tusks weighing less than 15 pounds may not be killed; a 50-pound tusk is considered good. Some reaching 90 pounds and a very few over 100 pounds appear each year (page 266).

Frequently old big-tusked males boldly raid cultivated land in the dark of night and destroy entire crops. Before dawn they have traveled many miles from their crime. We sometimes picked up weeping owners rushing into district headquarters to report depredations so that game scouts could be sent out to find the robber and dispatch him.

An elephant tail, proudly presented and proudly received, was given to my wife one Christmas as a token of esteem.

Though Lotukas have no fear of big game, some small animals cause them to quaver with fright. They brought us puffing, harmless chameleons at the end of long forked or

Smothered with Firewood, a Sadanese Pahnay Auker is in the Blue Nile Outside Khartoum

4. Servants Bargain for Masters' Tables in Kharoon Market

Knowledge of a child's situation is essential to the proper treatment. The physician, however, using the information supplied by the nurse, is often in a better position to make a correct diagnosis. The nurse should be able to give the physician a clear picture of the child's condition, and should be able to explain the child's behavior.

4. The first two steps are the same as in the previous example. The third step is to find the value of the function at the point $(1, 1)$. The function value is $f(1, 1) = 1 + 1 = 2$. The fourth step is to find the value of the function at the point $(2, 2)$. The function value is $f(2, 2) = 4 + 4 = 8$. The fifth step is to find the value of the function at the point $(3, 3)$. The function value is $f(3, 3) = 9 + 9 = 18$. The sixth step is to find the value of the function at the point $(4, 4)$. The function value is $f(4, 4) = 16 + 16 = 32$. The seventh step is to find the value of the function at the point $(5, 5)$. The function value is $f(5, 5) = 25 + 25 = 50$. The eighth step is to find the value of the function at the point $(6, 6)$. The function value is $f(6, 6) = 36 + 36 = 72$. The ninth step is to find the value of the function at the point $(7, 7)$. The function value is $f(7, 7) = 49 + 49 = 98$. The tenth step is to find the value of the function at the point $(8, 8)$. The function value is $f(8, 8) = 64 + 64 = 128$. The eleventh step is to find the value of the function at the point $(9, 9)$. The function value is $f(9, 9) = 81 + 81 = 162$. The twelfth step is to find the value of the function at the point $(10, 10)$. The function value is $f(10, 10) = 100 + 100 = 200$. The thirteenth step is to find the value of the function at the point $(11, 11)$. The function value is $f(11, 11) = 121 + 121 = 242$. The fourteenth step is to find the value of the function at the point $(12, 12)$. The function value is $f(12, 12) = 144 + 144 = 288$. The fifteenth step is to find the value of the function at the point $(13, 13)$. The function value is $f(13, 13) = 169 + 169 = 338$. The sixteenth step is to find the value of the function at the point $(14, 14)$. The function value is $f(14, 14) = 196 + 196 = 392$. The seventeenth step is to find the value of the function at the point $(15, 15)$. The function value is $f(15, 15) = 225 + 225 = 450$. The eighteenth step is to find the value of the function at the point $(16, 16)$. The function value is $f(16, 16) = 256 + 256 = 512$. The nineteenth step is to find the value of the function at the point $(17, 17)$. The function value is $f(17, 17) = 289 + 289 = 578$. The twentieth step is to find the value of the function at the point $(18, 18)$. The function value is $f(18, 18) = 324 + 324 = 648$. The twenty-first step is to find the value of the function at the point $(19, 19)$. The function value is $f(19, 19) = 361 + 361 = 722$. The twenty-second step is to find the value of the function at the point $(20, 20)$. The function value is $f(20, 20) = 400 + 400 = 800$. The twenty-third step is to find the value of the function at the point $(21, 21)$. The function value is $f(21, 21) = 441 + 441 = 882$. The twenty-fourth step is to find the value of the function at the point $(22, 22)$. The function value is $f(22, 22) = 484 + 484 = 968$. The twenty-fifth step is to find the value of the function at the point $(23, 23)$. The function value is $f(23, 23) = 529 + 529 = 1058$. The twenty-sixth step is to find the value of the function at the point $(24, 24)$. The function value is $f(24, 24) = 576 + 576 = 1152$. The twenty-seventh step is to find the value of the function at the point $(25, 25)$. The function value is $f(25, 25) = 625 + 625 = 1250$. The twenty-eighth step is to find the value of the function at the point $(26, 26)$. The function value is $f(26, 26) = 676 + 676 = 1352$. The twenty-ninth step is to find the value of the function at the point $(27, 27)$. The function value is $f(27, 27) = 729 + 729 = 1458$. The thirtieth step is to find the value of the function at the point $(28, 28)$. The function value is $f(28, 28) = 784 + 784 = 1568$. The thirty-first step is to find the value of the function at the point $(29, 29)$. The function value is $f(29, 29) = 841 + 841 = 1682$. The thirty-second step is to find the value of the function at the point $(30, 30)$. The function value is $f(30, 30) = 900 + 900 = 1800$. The thirty-third step is to find the value of the function at the point $(31, 31)$. The function value is $f(31, 31) = 961 + 961 = 1922$. The thirty-fourth step is to find the value of the function at the point $(32, 32)$. The function value is $f(32, 32) = 1024 + 1024 = 2048$. The thirty-fifth step is to find the value of the function at the point $(33, 33)$. The function value is $f(33, 33) = 1089 + 1089 = 2178$. The thirty-sixth step is to find the value of the function at the point $(34, 34)$. The function value is $f(34, 34) = 1156 + 1156 = 2312$. The thirty-seventh step is to find the value of the function at the point $(35, 35)$. The function value is $f(35, 35) = 1225 + 1225 = 2450$. The thirty-eighth step is to find the value of the function at the point $(36, 36)$. The function value is $f(36, 36) = 1296 + 1296 = 2592$. The thirty-ninth step is to find the value of the function at the point $(37, 37)$. The function value is $f(37, 37) = 1369 + 1369 = 2738$. The fortieth step is to find the value of the function at the point $(38, 38)$. The function value is $f(38, 38) = 1444 + 1444 = 2888$. The forty-first step is to find the value of the function at the point $(39, 39)$. The function value is $f(39, 39) = 1521 + 1521 = 3042$. The forty-second step is to find the value of the function at the point $(40, 40)$. The function value is $f(40, 40) = 1600 + 1600 = 3200$. The forty-third step is to find the value of the function at the point $(41, 41)$. The function value is $f(41, 41) = 1681 + 1681 = 3362$. The forty-fourth step is to find the value of the function at the point $(42, 42)$. The function value is $f(42, 42) = 1764 + 1764 = 3528$. The forty-fifth step is to find the value of the function at the point $(43, 43)$. The function value is $f(43, 43) = 1849 + 1849 = 3698$. The forty-sixth step is to find the value of the function at the point $(44, 44)$. The function value is $f(44, 44) = 1936 + 1936 = 3872$. The forty-seventh step is to find the value of the function at the point $(45, 45)$. The function value is $f(45, 45) = 2025 + 2025 = 4050$. The forty-eighth step is to find the value of the function at the point $(46, 46)$. The function value is $f(46, 46) = 2116 + 2116 = 4232$. The forty-ninth step is to find the value of the function at the point $(47, 47)$. The function value is $f(47, 47) = 2209 + 2209 = 4418$. The fiftieth step is to find the value of the function at the point $(48, 48)$. The function value is $f(48, 48) = 2304 + 2304 = 4608$. The fifty-first step is to find the value of the function at the point $(49, 49)$. The function value is $f(49, 49) = 2401 + 2401 = 4802$. The fifty-second step is to find the value of the function at the point $(50, 50)$. The function value is $f(50, 50) = 2500 + 2500 = 5000$. The fifty-third step is to find the value of the function at the point $(51, 51)$. The function value is $f(51, 51) = 2601 + 2601 = 5202$. The fifty-fourth step is to find the value of the function at the point $(52, 52)$. The function value is $f(52, 52) = 2704 + 2704 = 5408$. The fifty-fifth step is to find the value of the function at the point $(53, 53)$. The function value is $f(53, 53) = 2809 + 2809 = 5618$. The fifty-sixth step is to find the value of the function at the point $(54, 54)$. The function value is $f(54, 54) = 2916 + 2916 = 5832$. The fifty-seventh step is to find the value of the function at the point $(55, 55)$. The function value is $f(55, 55) = 3025 + 3025 = 6050$. The fifty-eighth step is to find the value of the function at the point $(56, 56)$. The function value is $f(56, 56) = 3136 + 3136 = 6272$. The fifty-ninth step is to find the value of the function at the point $(57, 57)$. The function value is $f(57, 57) = 3249 + 3249 = 6498$. The sixtieth step is to find the value of the function at the point $(58, 58)$. The function value is $f(58, 58) = 3364 + 3364 = 6728$. The sixty-first step is to find the value of the function at the point $(59, 59)$. The function value is $f(59, 59) = 3481 + 3481 = 6962$. The sixty-second step is to find the value of the function at the point $(60, 60)$. The function value is $f(60, 60) = 3600 + 3600 = 7200$. The sixty-third step is to find the value of the function at the point $(61, 61)$. The function value is $f(61, 61) = 3721 + 3721 = 7442$. The sixty-fourth step is to find the value of the function at the point $(62, 62)$. The function value is $f(62, 62) = 3844 + 3844 = 7688$. The sixty-fifth step is to find the value of the function at the point $(63, 63)$. The function value is $f(63, 63) = 3969 + 3969 = 7938$. The sixty-sixth step is to find the value of the function at the point $(64, 64)$. The function value is $f(64, 64) = 4096 + 4096 = 8192$. The sixty-seventh step is to find the value of the function at the point $(65, 65)$. The function value is $f(65, 65) = 4225 + 4225 = 8450$. The sixty-eighth step is to find the value of the function at the point $(66, 66)$. The function value is $f(66, 66) = 4356 + 4356 = 8712$. The sixty-ninth step is to find the value of the function at the point $(67, 67)$. The function value is $f(67, 67) = 4489 +$

$\frac{1}{2} \left(\frac{1}{2} \right) = \frac{1}{4}$

► An online version of this book is available at www.pearsoned.com. The text is available in print as the *Advanced Life Protection* (10th ed.) and the *Advanced Fire Protection* (10th ed.) books.

It is not clear whether the results of this study are generalizable to other populations. The study was conducted in a single center and the sample was relatively small. The study was also limited by the use of self-reported data, which may be subject to bias. Despite these limitations, the study provides valuable information on the prevalence of depression in the elderly and the impact of social support on mental health.

2. *Chlorophyll a* and *Chlorophyll b* were determined by the method of Lichtenthaler (1987).

8. Zebu Cattle at Tirit Garry Black Vertical Bands on Humps to Show Inoculation Against Tick-borne Disease

These fleecy animals are of the same breed as the very numerous, more slender ones to be seen in the same place. They are of the same color, but the black vertical bands on the humps are absent. The fleecy animals are of the same breed as the very numerous, more slender ones to be seen in the same place. They are of the same color, but the black vertical bands on the humps are absent.

It is to be noted that a number of the animals have a very fine supply of ticks.

 used for many purposes.

noosed sticks. If a chameleon was touched, they said, syphilis or leprosy would result.

They brought snakes limp hanging from long sticks. Among these catches were innocuous tiny black burrowers and thin, bright-green grass dwellers; also dangerous vipers, cobras, boomslangs, 12-foot mambas, and ugly, bloated adders.

The Lotuka's knowledge of large and small animals about him greatly aided our parasitological research. We organized gangs of boys with clever nooses to trap 6-ounce snout-nosed elephant shrews which harbored a peculiar malaria we had come so far to study.

We wanted to know its relation to human malaria, the host's adaptability to laboratory cages, and its potential value for research on human malaria. We found that the elephant shrew malaria parasite has a quite different life cycle from the one which causes human malaria. It is still being studied at the Naval Medical Center, Bethesda, Maryland.

Lotuka hunting knowledge also aided us in finding rodents and other animals harboring other diseases; also ticks, fleas, and lice which we wished to study for their relation to human disease.

Lotuka Women Catch Catfish

Fishing is female sport. Early on dry-season mornings hundreds of net-encumbered, clattering women used to trek past our house to the near-by river. Older women, holding nets, knelt in the water at a narrow turn to form a human barricade. Girls raced a mile upstream, then plunged into the water and, with arms and legs flailing, moved downstream toward their waiting elders.

When excited girls and garrulous matrons met, blackened waters churned with long whiskered catfish. The women scooped them up in nets and carried them home.

We never tired of watching the dances that are the Lotuka's favorite entertainment. For days beer-tipping mobs danced to wildly booming drums, tooting whistles, and low-voiced faghorn trumpets. Celebrations became marathons of sweat-soaked excitement, though specific dance patterns were vague.

High stepping, spear-toting, roaring men, ranged in age groups, pranced around the village central circle. In front, facing them, nimble-footed, loose-hipped women swayed, urging the men onward.

On the side lines, village maidens more decorously went through intricate steps and body movements. They moved with downcast eyes, but even six-year-olds sensed every youth's admiring glance. They danced silently, expertly, ceaselessly, hour after hour.

In the throng's center, beside sacred upright drum poles, special drummers beat their club's

chosen tunes. Should a rival club attempt to steal another's tune, a frenzied stick fight follows. Individual drums are highly esteemed; some even have names.

The most powerful drummer we knew was Lomah of Tirangole, chief and rabi maker of the little-tamed Lotuka of the plains. He could beat his chest high drum all day and night with flattened hands. Women, breaking through the entranced multitude around him, wiped his sweating brow and chest. Shrilly lulding his praise, they sprinkled him with beer and grass. For Lotuka no drum is a rain-making power.

Except for decorating themselves with red ocher or white flour paste, the women wear no extra dance costume beyond everyday iron chains or goatskins.

A heavy peaked mud hat, overlaid with brass plates, is the most important item of men's regalia (page 264). White ostrich plumes, black ostrich pompons, and empty cartridge shells adorn the hat's peak. Atop this waves a long wand decorated with little red and black feathers.

Each man boasts ivory or wart-hog tusk arm bands. He carries a narrow white buffalo-hide shield bedecked with black ostrich pompons. Some also hold little brass tomahawks.

In his other hand the dancer bears a long, thin, untipped spear shaft ringed with brass bands. Hair tufts from dangerous animals tied to the shaft attest the hunter's bravery.

Another dance costume consists of a cattle-horn trumpet suspended on a chain from the neck, strings of jingling bells, a leopard skin tied casually over the shoulders, or a black-and-white colobus monkey skin around the waist. Wealthy individuals wear heavy wide brass neckbands or large brass plate pendants on their chests. Rarely, conch-shell bands are worn across the cheeks; these show influence from "foreign" tribes.

Hollam, "Creator of People"

Dances opening the hunting season and the planting season are the year's liveliest. While grain is in the bloom, drums are silent. Only quiet dances mark deaths or other ceremonies.

The Lotuka religion is a simple one. Missionaries have implanted the idea that God creates people and governs their lives. Now Christians and most pagans alike accept this belief in one form or another.

God, called *Hollam*, formerly meant "creator of people." Early European priests could know very little about Hollam, but because they heard the name always reverently pronounced, they referred to the Christian Deity by the same name.

The people also speak of a vague spirit called *ojok*, which may be either good or bad.

announced it to be the cure for his ailment, the pain, and dashed it into the fire with a ceremonial bark. With that the patient was pronounced cured.

Bride's Cows 100 Goats, 10 Cattle

About the time a Lush youth is put away into the rank of warrior, he comes with the girl of his choice. When the girl's parents take them on the morning following their escape, she has replaced her animal skin gown with a goat-skin skirt. The young man is expected to pay her father the bride price of 100 goats and 10 cattle.

The host and suppler of food and beer for a Sunday feast of the father-in-law and his relatives are held in great honor and respect.

Violence has become a serious problem, and a white man's law has substituted fines for old-fashioned beating of offenders. Reports of murders, however, are sent to jail.

Marital relations are increasingly varied and diverse. Infidelity is rampant. The main purpose of men who have several wives is keeping power. When a woman ceases childbearing, she is set aside and a younger wife introduced into the family circle, for then she becomes a heavy burden.

Infant mortality is very high. Children are treasured with love by parents until they have survived the first perilous months. Later, Lushaka family ties are close, and the girl grows up with.

We observed some of their funeral customs. After death the deceased's head was wrapped by a woman closely related to the clan. The body was then placed in a grave dug beside the family hut. Horns and jaws of goats eaten at the death feast were hung on a pole at the head of the mound.

Mud Taken from Termito Holes: Plasters & Lushaka Hut

When a Lushaka builds a new house, he comes to the Termito holes and sucks mud from them. This mud is used to plaster the walls and floors of the house. The mud is also used to make a special kind of clay.

As soon as the departed one was removed from the hut, he was sprinkled the body with powdered contents of a small gourd. Two fumes drawn from the gourd entered the lungs. The body was then placed in a bound position. The body was covered by a leopard skin. The body was then placed in a lead. All persons gathered in for the first time rushed up to wash their arrows and spears with the mud.

After a month's mourning, relatives kill an animal. While they feast, they discuss the dead man's successor and payment of his debts. Two years later the bones are di-

Like a Barnyard Rooster, a Tame Ostrich Wanders Past the Men's Club

Male Lotuka are the possessor of a knowledge of the ways of the world. They persons of higher rank may at times be seen in the company of a tame ostrich, which is a symbol of power and wealth.

interrelated and each is put in a special grave near the village. The open grave is revered for two more months, then closed.

A common characteristic of African society is the individual's sense of belonging to a group or a number of interrelated groups. In such a society the individual is ruled by the customs and interests of his community.

Traveling elsewhere in Africa, I saw numerous vivid examples of demoralized, aimless people bereft of the memory of their old customs. In contrast, I found the south-eastern Sudan undergoing a relatively peaceful transition to 20th-century progress. Here the slow, planned intrusion of civilization has not created tribal disruption.

Southeastern Sudan has been administered only since the 1940's. First emphasis was placed on eliminating tribal feuds, protecting life, and restoring order. A regular court system, army, and wildlife service took over what had been the tribal courts.

Schools have been established for the children of learning. Now more advanced schools meet growing needs.

Two hospitals are maintained in large villages, dispensing services to the people. Some of

these are staffed by Sudanese trained in Khartoum and the United Kingdom. The need for curative and preventive medicine is, of course, infinitely greater than available facilities.

In order to gain additional benefits, a program of interesting natives in the use and value of money has been inaugurated. Markets for barter and exchange, which had not an interest was formerly slow, are gradually becoming popular.

Twenty-two thousand adult Lotuka now contribute an annual tax amounting to a dollar each for governmental services.

Western laws cover only such matters as murder, robbery, and serious offenses. Serious offenses are dealt with by the tribal courts. This is decided most largely by the tribal elders, the more difficult ones including murder. The Lotuka have learned to go out of every three taxpayers and send one to court each year.

Local government is elected every two years by the people. The council consists of elected chiefs. District councils replace commissioners when the people have enough experience to govern themselves. This already has happened in northern districts, but in the south progress is slower.

The Author, a Bird-gist, Finds in a Rocky California Gorge
the First Conclusive Evidence of a Hibernating Bird

By EDMUND C. JAEGER

A CHANCE trip up a rocky California gorge led me, on a recent Christmas holiday, to an important scientific discovery.

Two companions, like myself lovers of camping and the outdoors, shared in the event, which ornithologists have since hailed as one of the most significant of its kind in the past century. A small bird was the principal actor in the drama.

Most residents of the eastern United States and Canada are familiar with the whippoorwill which repeatedly calls its name in the evening and before dawn. In the western United States lives a close bird relative called Nuttall's poorwill. It is smaller but similar in appearance.

Poorwill Lacks a Whip

The poorwill's voice is perhaps better known than the bird itself. Its charming call note, repeated with marked regularity, often throughout the night, is a simple "poor-will" instead of the "whip-poor-will" of its eastern cousin. Sometimes, if the observer is very near, a third short note, "up," is heard.

Especially in desert regions this nocturnal bird is seen in early evening sitting or flying upward, almost batlike as it dexterously snaps up insects in its short, wide, bristle-fringed beak. It is an inquisitive bird and certainly not timid, for it is sometimes caught by hand.*

In warm summer evenings I have had poorwills let me come up to within a few feet of them before they flew away. Even then they would retreat less than a hundred feet, generally directly in front and facing me. When driving at night, I sometimes see their big eyes gleaming with a peculiar bright red iridescence, reflecting the headlights' beam.

The poorwill's strange and somewhat mournful note is generally first heard in our warm southern deserts in late February or mid-March. It persists throughout summer until late October, when suddenly it ceases.

It had always been assumed that the bird's sudden silence in early autumn was due to its migration southward to spend winter in warmer lands below the American-Mexican border. However, there was no direct evidence to support this view. Here, then, was a gap in the poorwill's life history that invited investigation.

I spent a part of the Christmas holidays of 1946 in the Chuckwalla Mountains with two

college students, Milton Montgomery and Jerry Schulte. These mountains lie near the southeast tip of California, midway in the Colorado Desert between Salton Sea and the Colorado River. They are a low, rocky range, steep-sided and with many narrow gorges; here and there lie strange, jumbled piles of giant boulders.

We made our camp in the open desert where we could get the early morning sun. Our days, we decided, would be spent exploring the wild canyons which lead from the flat desert well back into the main mountain mass of deep-red rocks.

Both of the young men who were with me were inexperienced in this sort of desert exploration, and for them every day was filled with hours of high excitement and intense interest. It was an introduction to a strange new world, and every night they talked excitedly of the new experiences of the day.

Treasure in a Canyon Wall

The third vacation morning was to be a day of dramatic discovery. As we walked up one of the numerous minor narrow defiles, Montgomery, the most agile and always leading the way, expressed amazement at the strange contrivances of gnarled ironwood roots exposed in small rock crevices. Then he called my attention to what he thought was another gray-barked root wedged in the canyon's wall, about 2½ feet from the sandy bottom.

"No, no, that's no root!" I exclaimed. "That's a bird! And a poorwill at that!"

So nearly did its brownish-gray, black, and white mottled plumage match the gray of the granite, so neatly did its body almost fill the cuplike rock crypt in which it sat that only the most careful observer would ever have noticed it (page 275).

"It must be dead or sick," said Schulte. "Look, it doesn't even move when we talk."

For more than ten minutes two of us watched the bird while Montgomery ran back to camp to get the camera. When he returned, we took several pictures of the well-camouflaged creature, still undisturbed in its cranny. Then I reached forward and touched it gently.

There was no response. I stroked its back and wing feathers; still not the slightest move-

decide. I even checked the eyes of "Lon Coyote."

At any rate, our bare feet had not been disturbed.

All these observations put our minds in a high state of excitement. "Is it possible," we asked, "that this bird is just awaking from a state of true hibernation?"

What biologists call winter torpor is a phenomenon well known among many kinds of animals from insects and fish to bears and lions. It

is not even a true sleep, notably because the animal is not asleep—but it is not a true hibernation.

The term is reserved for a specific condition found, for example, in mammals such as the hedgehog. In true hibernation, the bird is in winter not only extreme drowsiness but also a marked lowering of body temperature and nearly complete cessation of its most vital body functions. Such a physiological state had never been known among birds.

In late November of the following winter we again visited "poorwill gorge." As I came around the canyon rim and down to my trap, and there was a poorwill, presumably the same one, in the identical pool and in the same typical position. I decided to make a series of observations and experiments at once to determine what was really going on.

First of all, I placed a numbered aluminum band around the short lower leg so I could be certain in the future that

Biologists Explore a Dark Crevice

was only missing the same bird. Then I walked over a plain with a desert Pinyon, a *Pinus monophylla*, and a *Quercus*.

Let's write this out in the form of a theorem. Theorem 1. Let f be a function on \mathbb{R}^n that is continuous at \mathbf{a} and let \mathbf{g} be a function on \mathbb{R}^n that is continuous at \mathbf{a} . Then the function h defined by $h(\mathbf{x}) = f(\mathbf{x}) + \mathbf{g}(\mathbf{x})$ is continuous at \mathbf{a} . The function h is continuous at \mathbf{a} because f and \mathbf{g} are continuous at \mathbf{a} . The function h is continuous at \mathbf{a} because f and \mathbf{g} are continuous at \mathbf{a} .

$$\Delta \mathbf{z} = \mathbf{z}(\mathbf{w}_1) - \mathbf{z}(\mathbf{w}_2) = \left[\frac{1}{2}(\mathbf{w}_1 + \mathbf{w}_2)^T \mathbf{A}(\mathbf{w}_1 - \mathbf{w}_2) \right] \mathbf{A}^{-1}(\mathbf{w}_1 - \mathbf{w}_2)$$

slight variation upward; never did it go above

being consumed to maintain the slowly running current of life.

I realized more fully than ever the depth of its "hibernation slumber" when I visited the poorwill on December 8, 1947. The day before, a storm of sleet, hail, and wind had descended upon the Chuckwalla Mountain area from the west. In its shallow crypt the poorwill was exposed to much of the storm's fury. The fall feathers were badly beaten up, so much so that they remained tattered all the rest of the season. Yet the bird in its strange half-dead, half-alive state had sat apparently oblivious of the buffeting.

One night in January we visited our bird and found it "sleeping" with its right eye wide open. I immediately saw an opportunity for another experiment. One of the boys had with him a small fountain-pen-type flashlight, giving a 7-candlepower beam. Holding the flashlight within two inches, we directed the beam directly into the open eye, holding it there a full minute. There was no show of discomfort and not even the slightest effort to close the eyelid; nor could we detect any other body response.

Mirror Detects No Breathing

A cold metal mirror held up to the bird's small tubular nostrils showed no moisture condensation such as would be seen if there were any perceptible breathing. A stethoscope held over the chest gave us not even the faintest sound of a beating heart.

Yet this same bird two months later came back, within a space of a few days, to a state of active normalcy and flew out of our hands when we picked it out of its winter quarters in the granite rocks.

In the season of 1949-50, from late November to February, we made our fourth series of observations at the permanent winter headquarters of this same poorwill. We took motion pictures while we re-enacted our first discovery of the poorwill and the subsequent experiments carried on over four years. Our film star was the little poorwill, which had helped us establish one important biological fact: that birds do hibernate.

As soon as these findings were published in *Condor*, the official journal of the Cooper Ornithological Society, there was enormous response from biologists, especially ornithologists, all over the world. Letters of inquiry poured in from England, Germany, France, Denmark, Sweden, and even faraway Australia. Notices and reviews appeared in magazines and puny journals.

Since before the times of Aristotle men have speculated on the possibility of bird hibernation. In the 18th century English naturalist Gilbert White toyed with the idea

again and again, especially in the case of swallows. Even as late as 1913 an American ornithologist wrote an article discrediting the continued repetition of the hibernation theory after 2,000 years. As a recent example, he cited its use to explain persistent failure to locate definitely a winter home for the chimney swift.

One of America's leading ornithologists, W. L. McAtee, wrote in the November-December, 1950, issue of *Audubon Magazine*:

"Reviewing the literature on bird torpidity in 1947, I had to conclude, up to that time, that there was no definite evidence that any bird can survive a full season of genuine hibernation. That gap in knowledge has now been filled. . . . Two thousand years after the time of Aristotle, Edmund C. Jaeger, Professor in Riverside College, has recorded the first scientifically observed instance of the trait.

The banded poorwill was seen only for a few weeks during the 1949-50 season. It then disappeared. What its fate was no one knows; it may have died or fallen prey to some predator. I do not think it was taken by any human hunter, for the chances of its being found were too few. Time after time I had tried to see if the students I took out with me could detect the bird even when told that they were near and about to walk past it. Not one found it without my aid.

Doubtless sometime in the future someone will find another hibernating poorwill, but it may not be soon. Evidently the birds are ordinarily very clever at hiding themselves, seeking out deep rock crevices or other places of secure concealment.

When I asked a Navajo Indian lad if he knew where poorwills go in winter, he immediately replied, "Up in the rocks." It is quite possible that these pastoral people have at times observed this bird in its winter torpor.

Scarce Food May Mean Longer Sleep

It is my belief that the depth of "hibernation slumber" differs from season to season, varying according to a number of external conditions. Among these is the available supply of flying insects, the birds' chief food.

During the winter of 1948-49 the banded poorwill was in its lethargic state for fully 89 days. During all this period I saw no moths flying about my nightly campfire. But as soon as the insects reappeared, the bird resumed its active state. Evidently the same conditions that bring flying insects into activity operate also to stimulate into normalcy the bird's fundamental body functions. At least in the case of our poorwill we must conclude that it is not temperature alone that determines the length of the hibernation period.

Every two minutes!

Just about every two minutes of the day, an Eastern Air Lines plane takes off from one of the country's airports on its vast metropolitan network. Headed by Capt. Eddieickenbaker, Eastern continues to build its already enviable operating record . . . a record which began twenty-four years ago and includes billions of passenger miles.

This has been made possible by Eastern's insistence on the most reliable personnel and equipment, plus rigid standards of aircraft maintenance. Specifically

ing only the finest lubricants. The Capt. Silver Fleet uses Sinclair and all engine oil exclusively. Eastern's long experience has proved the consistent dependability of Sinclair oils and greases . . . each produced through an intimate knowledge of every phase of aviation lubrication.

This "every 2 minutes" Sinclair lubricants help Eastern conduct operations with maximum economy and efficiency. Further testimony that Sinclair is a "great name in oil."

The "Travelingest Car" Ever Built!

The 1953 Nash Airflyte sedan is shown here in its standard form, but it can be converted into a touring car, a convertible, or a station wagon.

To those who travel — and live it — there's nothing to match the new 1953 Nash Airflyte.

See it now. You'll say that the 1953 Nash is the "travelingest car ever." Try its sensationally new power and economy, its matchless ride. Here are the widest seats and the greatest over-look visibility with the world's widest one-piece windshield. There's room aplenty for

your luggage, and its Weather-Flow Controlled Air System provides a weather-loving room's comfort.

Let your touring dreams come true. See the beautifully new 1953 Nash Airflyte. Philo Farrow's latest shining triumph. Let your Nash dealer show you how wonderful life can be wherever you travel — with a seat at the wheel of the new 1953 Airflyte!

New! Power Steering, a great convenience. You'll find it a real help when you're driving on rough roads. Power-Brake. Motor-Shift. These are available too.

Home-on-the-Road — makes traveling so much easier. You'll find it a real help when you're driving on rough roads. Power-Brake. Motor-Shift. These are available too.

3 Great Engines: In the 1953 Nash, you can choose between the 1600 cc. 4-cylinder, the 1800 cc. 6-cylinder, or the 2400 cc. 8-cylinder. In the Statesman, it's the new Power Flyer.

100 YEARS

OF PROVEN INSURANCE PROTECTION

About the middle of the Nineteenth Century this country was suffering acute growing pains. Immigration was heavy. The gold rush was on. Railroads were pushing westward. New frontiers and communities were being established.

Insurance was born.

Responding to this need, our ancestors furnished capital and launched several insurance companies. Many of these, or their successors, are prominent today. Among them are The Continental Insurance Company, the Fidelity-Phoenix Fire Insurance Company and the Niagara Fire Insurance Company, all members of the American Fire Insurance Group.

For more than a century these companies have shared in the trials and triumphs of America by providing industry and individuals with insurance protection and peace of mind.

A Salute to the 40,000 Who Bring Protection to You!

In this anniversary year, we salute our 40,000 Agents and the Brokers across the United States and Canada who bring American Fire protection into every community—to you.

The Hermitage, home of Andrew Jackson, near Nashville, Tenn.

He wouldn't black the officer's boots

A SOLDIER in the Revolution when only thirteen, the full-fledged Andrew Jackson was a war orphan. When given his first command, the commander of a company of soldiers refused an order to back a British retreat. "There's a question of war and a servant," he cried.

But in 1804, when Jackson met his wife, Rachel, she was still the orphaned daughter. Here he married Mrs. Rachel Calhoun, an old lady that her previous marriage had been annulled. The fact that it was not, however, later revealed led the first ladies Jackson met to regard death as a relief.

by his political enemies.

In 1824 when Jackson first ran for President, whether he ran the other candidates had a mission. The decision had to be made by Congress and that James A. Smith was chosen. Four years later the Hickory was chosen over the other candidates. Jackson was elected President. He was re-elected in 1829. He was re-elected in 1832. He was re-elected in 1836. He was re-elected in 1840. He was re-elected in 1844. He was re-elected in 1848. He was re-elected in 1852. He was re-elected in 1856. He was re-elected in 1860. He was re-elected in 1864. He was re-elected in 1868. He was re-elected in 1872. He was re-elected in 1876. He was re-elected in 1880. He was re-elected in 1884. He was re-elected in 1888. He was re-elected in 1892. He was re-elected in 1896. He was re-elected in 1900. He was re-elected in 1904. He was re-elected in 1908. He was re-elected in 1912. He was re-elected in 1916. He was re-elected in 1920. He was re-elected in 1924. He was re-elected in 1928. He was re-elected in 1932. He was re-elected in 1936. He was re-elected in 1940. He was re-elected in 1944. He was re-elected in 1948. He was re-elected in 1952. He was re-elected in 1956. He was re-elected in 1960. He was re-elected in 1964. He was re-elected in 1968. He was re-elected in 1972. He was re-elected in 1976. He was re-elected in 1980. He was re-elected in 1984. He was re-elected in 1988. He was re-elected in 1992. He was re-elected in 1996. He was re-elected in 2000. He was re-elected in 2004. He was re-elected in 2008. He was re-elected in 2012. He was re-elected in 2016. He was re-elected in 2020.

The Jacksons lived in 1819 and built the great white Hermitage.

His second administration saw the completion of the Hermitage, the largest Hermitage in America.

From 1817 to 1821, Jackson proved his military prowess in the Indian War. In 1819, during the critical period of expansion, the House of Representatives was divided to provide a solution of national unity. Jackson was elected President. He was re-elected in 1829. He was re-elected in 1832. He was re-elected in 1836. He was re-elected in 1840. He was re-elected in 1844. He was re-elected in 1848. He was re-elected in 1852. He was re-elected in 1856. He was re-elected in 1860. He was re-elected in 1864. He was re-elected in 1868. He was re-elected in 1872. He was re-elected in 1876. He was re-elected in 1880. He was re-elected in 1884. He was re-elected in 1888. He was re-elected in 1892. He was re-elected in 1896. He was re-elected in 1900. He was re-elected in 1904. He was re-elected in 1908. He was re-elected in 1912. He was re-elected in 1916. He was re-elected in 1920. He was re-elected in 1924. He was re-elected in 1928. He was re-elected in 1932. He was re-elected in 1936. He was re-elected in 1940. He was re-elected in 1944. He was re-elected in 1948. He was re-elected in 1952. He was re-elected in 1956. He was re-elected in 1960. He was re-elected in 1964. He was re-elected in 1968. All the Facts Are Yours FREE!

1. The first step is to identify the key components of the system. This includes understanding the hardware, software, and data involved. The next step is to define the goals and objectives of the project. This involves determining what the system is intended to achieve and how it will be evaluated. The third step is to design the system architecture. This includes defining the overall structure of the system, the components, and how they interact. The fourth step is to implement the system. This involves building the system components and integrating them into a cohesive whole. The final step is to test and evaluate the system. This involves running tests to ensure the system meets the requirements and is reliable.

THE HOSPITALITY STATE

Slumbertime Works Double-Time ...when you travel New York Central!

Children and adults ascribed *Zero Lead*® Paints to the same way. They're making travel time work double-time. A zero lead paint that makes every night a slumber party.

So are New York Central's big, cozy, comfortable sleeping cars, where you'll find our world's largest sleeping painted rooms with carpeted floors. A perfect

new setting for sweet sleep. Perfect for the "I'm not tired" crowd, too. You'll find no double-zero lead paint in our cars at all, and you'll sleep good.

Best of all, your New York Central sleeping car is the only one in the country that's painted with our "Zero Lead" paint. And you'll sleep twice as good.

Business Really Getting Some Sleep? Get into your sleeping car. When you're sleeping, you're working. And that's how you can get the most out of your New York Central.

The BIG VACATION

These pictures are just samples of the contrasts and variety that make a Southern California vacation such a thrilling change for you, such a big experience.

For most of the year, you can enjoy weather and scenery that's just what you need.

Whether you want to relax on a beach, or enjoy the sun, or the snow, or the water, or the mountains, or the city, or the country, or the big outdoors, or the big indoors, or the big everything, you can find it all in Southern California.

At home, you can find it all in Southern California. At home, you can find it all in Southern California. At home, you can find it all in Southern California. At home, you can find it all in Southern California.

1. **Preparation:** The first step is to prepare the data. This involves cleaning the data, removing missing values, and normalizing the data. The data is then split into a training set and a testing set.

2. **Model Selection:** The next step is to select a model. This involves choosing a model that is suitable for the task. In this case, a linear regression model is chosen.

3. **Training:** The third step is to train the model. This involves feeding the training set into the model and adjusting the model's parameters to minimize the error.

4. **Evaluation:** The final step is to evaluate the model. This involves feeding the testing set into the model and measuring the model's performance.

again . . ."

The Layoff, Its Symbolism: — When a person is laid off from his job, he is often faced with the prospect of a new beginning. This is a time when the future is uncertain, and the past is a memory. The Layoff is a symbol of the end of one chapter and the beginning of another.

This is the time of year — the lengthening days give promise that Spring is close at hand — when people soon will be visiting their family cemetery plot to find spiritual strength and courage. For the family monument expresses, as nothing else can, all those qualities they loved most dearly. It was living and permanent symbol to those who but a short time ago were with them — working with them — joking with them — guiding them — understanding them.

The monument in your cemetery represents a personal family bond. It is a thought, a proud tradition . . . a symbol that will live on for generations to speak of you and yours. In choosing the right family monument, you need the counsel and help of a trusted dealer. Look for integrity and high standards. Look, too, for the Rock of Ages trademark in the granite, for this is your assurance of value.

Ask your Authorized Rock of Ages Dealer for a free copy of "How To Choose a Family Monument." You'll find his name in the Classified Section of the Telephone Directory, or write Rock of Ages, Barre, Vermont.

ROCK of AGES

NEW cushion plastic tightfit LOOSE FALSE TEETH

Many dentists are now using this new cushion plastic tightfit loose false teeth. They are made of a special plastic material that fits snugly over the gums, giving a natural appearance and feeling. They are also very comfortable to wear and are easy to clean. Write for a free brochure to Dentureeze, Inc., 1000 West 10th St., San Francisco, Calif. 94118.

DENTUREEZE

MONEY BACK GUARANTEE

"We want to get back
before we've left!"

Says Mr. Daniel Davis of Longton, Mass., who has been vacationing with his family in Maine for 12 years. "The children can't sit still a minute—if it isn't swimming or fishing from the dock, it's a beach picnic. And we all get a big kick out of sailing—exploring the islands in the bay, having a clam bake on the rocks, and watching the lobster boats bring in their catches."

Maine has so much. That good salt air, lakes, the smell of pine, seafood, golf, summer theaters. Yes, so, we wouldn't settle for any place else!

What about your heart?

Perhaps no other part of the body has been studied as intensively as the heart. Today new techniques are being developed to reveal more and more facts about how the human heart works.

A great deal has been learned about the sources of energy which enable the heart to perform its Herculean task of carrying five to ten tons of blood through the arteries and veins every day—365 days a year—for the 75 years of the average individual's lifetime. In human life, that amount of work may reach the impressive total of 250,000 tons. Moreover, the heart must function continuously—resting only a fraction of a second between beats.

Studies in the diagnosis and treatment of heart disease have resulted in important advances—the perfecting of tests for heart disease, electrocardiograms and X-ray photographs of the heart and blood vessels. In addition, a better understanding of the action of heart drugs has been provided, so that they can now be used with greater benefit to patients. These and many other advances have made it possible for doctors to diagnose and treat heart trouble more effectively now than ever before.

Encouraging as these advances are, the fact remains that heart disease is still the leading cause of death. Today, in one form or another, ailments of

the heart and blood vessels affect some nine million people in our country.

It is wise for everyone to take certain simple precautions to protect the heart so that it may continue to do its job as one grows older. Here are some of them:

1. Do not wait for the appearance of symptoms that may indicate heart trouble—shortness of breath, rapid or irregular heart beat, pain in the chest—before seeing the doctor. It is far wiser to see your doctor while you are feeling perfectly well, so that he can check your heart condition up.

2. Keep your weight down. Excess weight strains the heart, blood and vessels. Doctors are now stressing the importance of diet in the treatment of various heart and blood vessel ailments.

3. Learn to take things in your stride. Avoid the stress, pressure and excitement of life. These can cause your heart to beat faster and put an extra burden on your system.

Even if heart disease should occur, remember that most people who have it can live just about as active people as—but at a slower pace. In fact, 80 per cent of patients follow the doctor's advice about adequate rest, weight control, and the avoidance of nervous tension and strenuous physical exertion, the outlook is reassuring.

Lucky Travelers

● Kansas City and Chicago are big cities. A lot of people want to travel back and forth between them. The Burlington Railroad, always ready to serve the public in the best possible manner, asked us to build two more of the famous streamline Burlington Zephyrs.

These trains, sleek and swift and so trim, complete with Vista-Dome cars, are the very latest in design and equipment, now put into daily service. Kansas City Zephyrs to Chicago. American River Zephyrs, by night.

This advances the tradition of superlative passenger service, begun with the first streamlined Pioneer Zephyr two decades ago. It is joined now by the Twin Cities Zephyrs, the Denver Zephyrs, the California Zephyrs and scores of other trains on America's foremost railroads.

All Budd built, all stainless steel, with the strength and safety that only this fabricator's name can give.

The Budd Company, Philadelphia, Detroit, Gary.

PIONEERS IN BETTER TRANSPORTATION

with **Sound Movies**

Don't — *directly* say, "I'm a racist" — however, it can be said "No, I'm not a racist" or "Oh, I'm not a racist" with a heavy cover of a "compulsive" personality structure and internalized "racism" and still be able to do what one would expect to see this "racist" do. Errors were not a like a one-way road!

Only the Pageant gives you all these superior features: a space-filling, brilliant color monitor; built-in stereo; a convenient built-in clock; a top-loading VCR. The Pageant has it all. And it's yours for only \$1,499. Call for the name of your nearest Showcoast Dealer today as well.

The first condition is a natural assumption for \mathcal{H}_{gen} and \mathcal{H}_{res} since they are both \mathcal{H} -subalgebras. The second condition is satisfied by \mathcal{H}_{gen} and \mathcal{H}_{res} since they are both \mathcal{H} -completes.

Amazing flexibility for extra-large showings
The Kodak Multisync 4000 is the only camera to feature a built-in 100% viewfinder. The viewfinder is large enough to show the entire picture frame. The camera is compact and lightweight. You know what's best for your camera? Kodak Multisync 4000. For more information, call 1-800-4-A-KODAK.

Lavishly Color-illustrated National Geographic Books Reveal Bird and Fish Life

THE BOOK OF FISHES—Here is the new 340-page edition of this famous book on fishing, conservation, and life of the watery world!

Edited by John Oliver La Gorce, it brings you 169 FULL-COLOR pages including 116 COLOR PAINTINGS and 24 COLOR PHOTOGRAPHS—with biographies—identifying 236 species of game and food fishes and other aquatic life in United States salt and fresh waters. Sixty-seven other photographs in color and 170 in monochrome illustrate the 15 engrossing chapters of high adventure and practical information.

Maroon-and-gray covers, 7" x 10¼". Because first cost was borne by the NATIONAL GEOGRAPHIC MAGAZINE, this superb volume is only \$6.50 in U. S. & Poss.; elsewhere, \$6.75, U. S. funds. Postpaid.

STALKING BIRDS WITH COLOR CAMERA—A revolution in wildlife illustration! In 189 pages of NATURAL COLOR there are 351 photographs, many in full-page size. Most of them were taken within arm's reach of the wild subjects. They include 1/5000-second flash pictures in color catching minute details of bird flight.

Edited by Dr. Gilbert Grosvenor, this beautiful 328-page book is a result of Dr. Arthur A. Allen's many years of ornithological research and expeditions, sponsored in great part by the National Geographic Society. Not just another "bird guide," it is a treasure of "inside information" on our feathered neighbors, pictured in their natural habitat.

As first cost was borne by The Magazine, *Stalking Birds with Color Camera* is moderately priced at \$7.50 in U. S. & Poss.; elsewhere, \$7.75 in U. S. funds. Postpaid. Rich green covers, 7" x 10¼".

Ned H. Dearborn, president of the National Safety Council, presenting the Award of Honor to Cleo F. Craig, president of the American Telephone and Telegraph Company.

Bell Telephone Companies Receive Highest Award of National Safety Council

Bell telephone men and women are proud of the Award of Honor presented to them recently by the National Safety Council. The award was in recognition of an outstanding record for two years.

It is no accident that the communications industry leads in safety. Telephone equipment and buildings are designed for safety. And on the wall of every Bell telephone building are these words—"No job is so important

and no service is so urgent that we cannot take time to perform our work safely."

The lineman on the pole, the driver on the highway, the operator at the switchboard, the men and women in the business offices—all have tried hard to live up to this safety creed.

We're grateful for this award and we're going to keep on trying to make the record even better.

"A Good Place to Work"

TONI FRIERELL

How green is your valley in Wales?

WANT an unbelievable change of pace? Just step across the border from England and meet the other-world of Wales. See the stark grandeur, feel the strength and power of this rugged landscape—the mountain masses, the wildly rushing streams alive with salmon and trout, the fresh, clean villages with their stone-walled, slate-roofed houses. Look out on broad valleys of shining green, on steep, emerald hillsides dotted with sheep. Stand atop Snowdon Mountain, legendary resting place of King Arthur's spirit and highest peak in all of Wales and England. Kick a cloud aside

and look down on your valley—now a distant hazy blue. Visit a picturesque coast town like Aberdovey where, they say, one can hear the tolling of bells from a city buried under the sea. Marvel at the medieval fortress city of Conway with its castle built by Edward I. seven centuries ago. Above all, hear the world's loveliest folk music, the voices of Welsh miners rising in rich harmony. The valleys echo with their hymns. How green, *always*, will be your memories of Wales! A totally different, *totally* wonderful country—and only *one* part of Britain. See your Travel Agent and Come to Britain.

*For further information and free literature on England, Scotland, Wales and Northern Ireland, see your Travel Agent or write:
